PAPERS OF THE PEABODY MUSEUM

- VOLUME I complete, with Index, bound in cloth, \$8.80.
- No. 1. STANDARD OR HEAD-DRESS? By Zelia Nuttall. 1888. 52 pages and 3 colored plates. \$1.00. An historical essay on a relic of Ancient Mexico.
- No. 2. THE KARANKAWA INDIANS, THE COAST PEOPLE OF TEXAS. By Albert S. Gatschet. 1891. 104 pages and map. \$1.00. Notes by C. A. Hammond and Alice W. Oliver, and a vocabulary obtained from Alice W. Oliver. Signatures only.
- No. 3. THE ATLATL OR SPEAR-THROWER OF THE ANCIENT MEXICANS. By Zelia Nuttall. 1891. 36 pages and 3 plates. 55 cents. Signatures only.
- No. 4. REPORT UPON PILE-STRUCTURES IN NAAMAN'S CREEK, NEAR CLAYMONT, DELAWARE. By Hilborne T. Cresson. 1892. 24 pages and illustrations in the text. 25 cents. Signatures only.
- No. 5. A STUDY OF OMAHA INDIAN MUSIC; INCLUDING TRANSCRIPTIONS OF 92 SONGS, WORDS AND MUSIC. By Alice C. Fletcher, aided by Francis La Flesche. 1893. 152 pages. \$2.25. With a report on the structural peculiarities of the music by John Comfort Fillmore.
- No. 6. PREHISTORIC BURIAL PLACES IN MAINE. By C. C. Willoughby. 1898. 52 pages, 4 plates, and 50 illustrations in the text. 75 cents.
- No. 7. A PENITENTIAL RITE OF THE ANCIENT MEXICANS. By Zelia Nuttall. 1904. 26 pages, 5 plates, and 8 illustrations in the text. 50 cents.
- VOLUME II, \$5.50; bound in cloth, \$7.50.
- THE FUNDAMENTAL PRINCIPLES OF OLD AND NEW WORLD CIVILIZATION. By Zelia Nuttall. 1901. 602 pages, 7 plates, and 73 illustrations in the text, and Index. Signatures only.
- VOLUME III complete, with Contents and Index, \$4.70; bound in cloth, \$7.20.
- No. 1. THE CAHOKIA AND SURROUNDING MOUND GROUPS. By D. I. Bushnell, Jr. 1904. 20 pages, 5 plates, map, and 7 illustrations in the text. 50 cents.
- No. 2. EXPLORATION OF MOUNDS, COAHOMA COUNTY, MISSISSIPPI. By Charles Peabody. 1904. 44 pages and 17 plates. \$1.00.
- No. 3. INHERITANCE OF DIGITAL MALFORMATION IN MAN. By W. C. Farabee. 1905. 13 pages and 5 plates. 35 cents.
- No. 4. THE MANDANS: A STUDY OF THEIR CULTURE, ARCHAEOLOGY, AND LANGUAGE. By G. F. Will and H. J. Spinden. 1906. 141 pages, 4 maps, 15 plates, and 16 illustrations in the text. \$2.35.
- No. 5. DISCOVERY OF A FRAGMENT OF THE PRINTED COPY OF THE WORK ON THE MILLCAYAC LANGUAGE [OF CHILE] BY LUIS DE VALDIVIA. By Rudolph R. Schuller. 1913. 37 pages. 50 cents. Photographic reproduction of 4 pages of the work, with Bibliographic Notice.
- VOLUME IV complete, with Contents, \$4.50; bound in cloth, \$7.00.
- No. 1. REPRESENTATIONS OF DEITIES OF THE MAYA MANUSCRIPTS. By Paul Schellhas. 1904. 47 pages, 1 plate, and 65 illustrations in the text. 50 cents. A translation.
- No. 2. COMMENTARY ON THE MAYA MANUSCRIPT IN THE ROYAL PUBLIC LIBRARY OF DRESDEN. By Ernst Förstemann. 1906. 221 pages, 1 plate, and 10 illustrations in the text. \$2.25. (A few copies have been interleaved, \$3.35.) A translation.
- No. 3. THE ANIMAL FIGURES IN THE MAYA CODICES. By A. M. Tozzer and G. M. Allen. 1910. 100 pages, 39 plates, and 24 illustrations in the text. \$1.75.
- VOLUME V, \$5.75; bound in cloth, \$8.25.
- THE ARCHAEOLOGY OF THE DELAWARE VALLEY. By Ernest Volk. 1911. 258 pages, 2 maps, 125 plates, and 26 illustrations in the text.
- VOLUME VI complete, with Contents, \$5.40; bound in cloth, \$7.90.
- No. 1. COMMENTARY ON THE MAYA-TZENTHAL CODEX PEREZ. By William E. Gates. 1910. 64 pages, 2 plates, and illustrations in the text. 65 cents.
- No. 2. A POSSIBLE SOLUTION OF THE NUMBER SERIES ON PAGES 51 TO 58 OF THE DRESDEN CODEX. By Carl E. Guthe. 1921. 31 pages and 1 plate. 50 cents.
- No. 3. ASTRONOMICAL NOTES ON THE MAYA CODICES. By Robert W. Willson. 1924. 46 pages, 9 plates, and 6 illustrations in the text. 75 cents.
- No. 4. THE REDUCTION OF MAYAN DATES. By Herbert J. Spinden. 1924. 286 pages, 4 plates, and 62 illustrations in the text. \$3.50.
- VOLUME VII, \$2.40; bound in cloth, \$4.90.
- HISTORY OF THE SPANISH CONQUEST OF YUCATAN AND OF THE ITZAS. By Philip Ainsworth Means. 1917. 206 pages, 5 plates, and map.
- VOLUME VIII complete, with Contents, \$8.25; bound in cloth, \$10.75.
- No. 1. INDIAN VILLAGE SITE AND CEMETERY NEAR MADISONVILLE, OHIO. By E. A. Hooton. 1920. 137 pages, 30 plates, and 5 illustrations in the text. \$2.25. Notes on the artifacts by C. C. Willoughby.
- No. 2. BASKET-MAKER CAVES OF NORTHEASTERN ARIZONA. By S. J. Guernsey and A. V. Kidder. 1921. 121 pages, 44 plates, and 16 illustrations in the text. \$3.75.
- No. 3. THE TURNER GROUP OF EARTHWORKS, HAMILTON COUNTY, OHIO. By C. C. Willoughby. 1922. 132 pages, 27 plates, and 47 illustrations in the text. \$2.25. Notes on the skeletal remains by E. A. Hooton.
- VOLUME IX, \$3.25; bound in cloth, \$5.75.
- A GRAMMAR OF THE MAYA LANGUAGE INCLUDING A BIBLIOGRAPHY, WITH AN APPRAISAL OF THE VARIOUS WORKS. By A. M. Tozzer. 1921. 301 pages.
- VOLUME X, \$3.20; bound in cloth, \$5.45.
- INDIAN TRIBES OF EASTERN PERU. By William C. Farabee. 1922. 194 pages, 28 plates, and 20 illustrations in the text. Introduction by Louis J. de Milhau.
- VOLUME XI complete, \$4.70; bound in cloth, \$7.20.
- No. 1. INDIAN BURIAL PLACE AT WINTHROP, MASSACHUSETTS. By C. C. Willoughby. 1924. 37 pages, 4 plates, and 20 illustrations in the text. 75 cents. Notes on the skeletal remains by E. A. Hooton.

FOREWORD

IF THE people now living in northeast Liberia were suddenly to disappear, most of the material culture left behind would be destroyed rapidly by termites and decay. They would leave behind them no ruins of temples or dwellings. Their paths would scarcely be distinguishable from the trails of the animals through the forest.

A century or two later their town sites might be marked chiefly by hearthstones in groups of three, associated with burned earth, charcoal, and pottery fragments. There would remain a few wrought-iron implements of good workmanship, some from native-smelted ores. There would be found a moderate amount of rather crude, heavy, brass jewelry—more rarely, brass figurines of coarse heavy texture and rough finish—and some rather well formed but poorly burned pottery. The beads associated with such a cache would consist chiefly of recognizable trade beads, but would include a few belonging to the local culture—of brass or iron, or the perforated canine teeth of chimpanzees or leopards. Cowrie shells would establish the contact of these people with other West African tribes.

If some accident were to preserve more perishable materials, there would be found coarse homespun cotton cloths and garments, wooden hairpins and combs, and fragments of woven raffia stuff. Simple basketry of various fibers might be found to give a general idea of the little things cherished by women. A carved wooden stool, an occasional clay pipe of a shape reminiscent of the stone pipes of American Indians, a fish hook, a razor, bows, arrows, spears, and knives with leather-covered scabbards might give a picture of the pastimes of the men.

If the physical remains of this culture could be recovered in sufficient detail, the investigator would undoubtedly be impressed by the frequent occurrence of wooden masks, found singly or in groups. Where a group of masks together indicated the location of a storage place for cult objects, there might be associated with them a few large ceremonial spoons,

and rarely a human figure carved in wood. Near by might be discovered various articles of costume and ritual, such as headdresses decorated with cowrie shells, red cloth, and feathers.

Without following further this imaginary picture of a culture left behind by a vanished people we might place a student in a similar position, by letting him go through a museum where were displayed articles collected from northeast Liberia, and try to deduce from them what sort of culture these tribes possessed. Given a very complete collection, and perhaps photographs of the people in their various activities, such a study still could not give a student a complete picture. There would still remain unknown to him the large realm which we designate as the social organization.

Going one step further and giving the student accounts and descriptions written by travelers through this country we could convey to him bit by bit some idea of the social structure. After comparing this with descriptions of people in similar and better-known environments the student might consider himself fairly well informed. It might even be that an anthropologist had passed that way, had spent considerable time photographing and measuring the people, and had described the things they did and how they did them. He might have stayed around long enough to have recorded part of the language and collected a large number of folk tales and an occasional joke.

If the anthropologist had been a careful investigator, he would undoubtedly have made note of the fact that many things he wanted to know were hidden from him, and that the most important things in the lives of these people were not discussed with outsiders. He might even have had an occasional frank informant who would tell him that these things were known only by the old men. If the men had talked at all, it would have been merely to say that such things were sacred and fully understood by only a handful of men in high positions in the secret societies.

If the investigator had been of such a mind he might, by paying suitable fees, have been allowed to join some of these secret societies, but unless he were of African descent he would not have been allowed membership in the inner circles, or more than a superficial contact with the more sacred properties of the priesthood. Even if he had secured some of these objects, he would have found it very difficult to obtain any detailed information as to their use. In any event, if he had joined a secret society, he would have had to swear on pain of death never to reveal any of the things he had learned, so that the advantage of membership to him as an anthropologist would have been completely neutralized by this oath of secrecy.

It is with a feeling of high privilege, therefore, that I find myself, after twenty-three years of residence in the midst of these people, the possessor of an accumulated knowledge of their most sacred objects which begins to fit together into a more or less comprehensive picture of the socio-religious forces which underlie their reactions to the more important crises of life.

The recently published report by George Schwab¹ was more than ten years in the form of a manuscript which gradually evolved into its present form. Schwab had to be content with only an occasional glimpse of the Poro and other secret societies. What little material he has from the northeastern tribes on these societies was compiled almost entirely from notes I placed at his disposal a good many years ago. In 1941 I published a study, *Native African Medicine*,² which succeeded in penetrating a little deeper into the fundamental conceptions designated, for want of a better term, as religious. About the same time I made a study of one hundred and sixteen masks which had been collected over a period of ten years.³ By the simple process of inquiring about the function of each mask as it was secretly brought to me, I accumulated enough information to make this preliminary study of the great secret society known as the Poro.

This collection of masks representing Poro officials was made during the period when the

Poro had been completely suppressed in this area by the Liberian Government, and the people had practically given up hope that it would ever function again. It has since been revived, but in a very modified and emasculated form, so that it is no longer the great educational institution it once was.

In the old days a group of boys would be taken into the sacred Bush (forest) whenever a chief's son arrived at the proper age, so that he could become the leader of the group. The boys remained isolated in their own small community in the forest for several years. During this time they were under very strict discipline. It was not unusual for the boys to see one of their comrades suffer the death penalty for some unforgivable offense. They received instruction in tribal history and tradition, the rules of polite conduct, formal and ritual dancing, and, as a matter of course, specific training for the parts they were to play in life as members of the tribe. They were divided into groups: one for the rulers, one for professional men, and a third for commoners. In these schools each boy learned his trade. The importance of what was going on was impressed upon the boys by high ritual administered by officials wearing masks, as did all Poro officials. Some of these rituals included a human sacrifice.

A boy graduated from this school thoroughly inculcated with a sense of loyalty to the traditions of his tribe. There were certain things that were simply not done. To reveal any of the secrets learned in the school was punishable by death.

My *Notes on the Poro in Liberia* published in 1941 presented the information available at that time concerning the Poro masks. They were supposed to represent spirits from the Bush. Their general effect when they appeared in public was to keep the women and children in ignorance and fear.

During the past eight years one hundred and fifty more masks have been collected. The information which came with them gradually changed in character because of two circumstances. One was an attempt on the part of the government officials to destroy the cult

¹ Schwab, 1947.

² Harley, 1941a.

³ Harley, 1941b.

houses and completely suppress the forlorn hope of the elders that the old customs would some day function again. This had the effect of placing on the market masks which were not strictly Poro, but had to do rather with priestly control of public conduct. The other circumstance was that the old "owners of the land" began to die off with no successors who knew how to take care of the sacred masks — since the function of controlling the people had now been taken over by the central government. As several of these patriarchs had been my personal friends, it was only natural that their sons should bring their sacred relics to me. Everyone knew that I collected masks and that I had never betrayed the confidence of anyone giving me information about their use. Nor had I ever shown an unsympathetic or disrespectful attitude toward their sacred objects and beliefs.

The present study resulted from the realization that the information regarding these masks and their functions opened up a broader and higher category of relationships than that of the Poro alone — which I had previously considered as all things to all men. At that earlier stage of information the Poro organization seemed all powerful, yet I gave a tentative description of an inner circle and a pyramiding of power until one high mogul sat and said: "I am what I am." It is not now certain that this pyramid was *within* the Poro. It was within the cult of the *masks*, of which the Poro was the most highly developed form for manifesting the power of the ancestors toward the people. Above this, the operations of the high priest and his council were secret even from the Poro initiate until he had reached the higher levels of the cult. A level might finally be reached at which a man's prestige extended across tribes that had no true Poro.

⁴That the essential religion of these people should be considered as a type of ancestor worship is further indicated by their frank prayer and sacrifice to ancestors at the grave; or at some great tree symbolic of the noble dead who were not buried but "went back into the forest"; or at the crossroads to contact those ancestral spirits who still walk the paths of their old haunts.

It is also worth noting that a mask is the same word used to designate the human spirit and the spirit of the ancestors. That this spirit idea is the very basis of

There was undoubtedly a wide network binding all the priests together under a supreme council. This was presided over by high officials selected by a kind of divine right from two or three families of supreme hereditary standing in the whole of Liberia. That this was true, I have had a definite clue from a member of one of these families, though I have no detailed or supporting documentation.

In the light of this new information it seems that the Poro should be considered as the logical development of ideas inherent in this larger conception of the functions of masks and their wearers. The present conception is that the masks are visible manifestations of a type of ancestor worship,⁴ debased, perhaps, by the necessity of using the masks as practical implements to guarantee the smooth working of a system of government founded on strict adherence to custom. This discussion of their use in a system of social control is based upon information obtained bit by bit from various informants. It applies particularly to the Mano and Gio tribes in northeast Liberia.

These tribesmen are agricultural people, living in villages in the forest country. They build round huts of sticks, mud, and thatch. They clear the forest and burn over the ground to plant rice and cassavas. In these farms they interplant small amounts of corn and vegetables and sometimes grow a little cotton. Their artisans include weavers, who use a very simple loom to produce narrow strips of homespun which are sewed together into garments. The blacksmith is an important craftsman in the community, fashioning hoes, knives, cutlasses, and formerly spears and arrowheads. Clay pots are made by the women. Mats, baskets, and such simple articles are woven by men or women from raffia, reeds, bark, and other materials.

the cult of masks is shown by the fact that where this cult has branched out and developed in its most all-pervading form, including the Poro, the term *ge* is also used to designate the great spirit which is supposed to swallow the boys, keep them in his belly during their seclusion in the Poro, and finally give them rebirth as full-fledged, but new-born, men. The marks of his teeth left on their bodies are evidence that they have been admitted into full tribal membership.

A group of professional men in the tribe are called *zo's* or "doctors." This term is not confined to herbal doctors or medicine men in the more magical sense, nor to "professors" in the sense of learned men with authoritative opinions on any subject. The term includes all of these, as well as master craftsmen, heads of guilds, priests, and chiefs of hereditary standing. These categories are not always separate, but often overlap. One individual might at the same time be a leading blacksmith, a town chief, and a priest; and other such combinations could occur. A *zo* is always an individual who deserves the respect of the community on one or more counts.

Before the subjugation of these tribes around the turn of the century by the coastal government their social and religious organization had persisted unchanged for a long time. The old, indigenous government functioned on two levels, not mutually exclusive, but overlapping. The first, which might be termed the civil phase, was concerned with the everyday management of the town and its citizens, common laws governing conduct, etc. On the second level, which may be thought of as religious, were the mechanisms for handling the crises and emergencies of life. It was in this second level of government, calculated to deal with the powerful, hidden, spiritual forces, that the masks found their special place.

The first, or civil, mechanism of social control included the external organization of chiefs and minor officers and was perfectly evident to casual observers. It was known and understood by all members of the group, including women and children. It was based upon a patriarchal system that controlled the people in a more or less democratic manner.

The head of the family ruled his immediate household. It was an easy step from this domestic rule to the authority of the "quarter chief" who heard complaints and settled petty palavers in a few families living side by side in the town and united by close ties of kinship. He would not hold formal court, but would talk matters over with interested people, sitting around almost anywhere. Everyone present had freedom of speech and of opinion. If there was a disagreement of a more serious nature, or if anyone objected to

the quarter chief's decisions, a more formal hearing would be held by the town chief. From here appeals could be carried to the clan chief. In all this, women had little to say unless called in as witnesses.

Town chiefs and clan chiefs had the custom of calling in the elders to help decide matters of complicated or obscure nature. They might sit in the town council and express their opinions openly and informally, but as a matter increased in importance, the meetings of the elders became more and more secret until they reached the final high council. This met at night in a secret part of the sacred Bush, presided over by a high priest with a simple but highly effective ritual.

There was a definite tendency for a special matter to be handled by a secret organization. One of these which enjoyed considerable prestige and power was composed entirely of old women who on occasion would lead a solemn procession through the town, wearing masses of beads, little horns of medicine, chimpanzee teeth, and ragged old garments. Each walked with a long ornamented staff, and each of the more important ones wore a square pad of homespun cotton balanced on top of her head. The leader carried a kind of censer fashioned of a gourd or small pot, not smoking but nevertheless emanating a powerful, invisible *mana* (inherent power), for these old women were smelling out witches. This was one occasion on which the men took a back seat.

The corresponding organization among the men was a kind of peerage called the *Ki La mi*, "skin people," because they carried animal skins to sit on. There was a stiff initiation fee, and a limitation of membership to individuals of outstanding intelligence or high hereditary standing. They conducted all their official deliberations in great secrecy. *Ki La mi* were exempt from the call to war. In fact, their great taboo was against fighting or quarreling of any kind. Even to shove one of them aside by the shoulder was like an insult to royalty. The same elders who appeared informally in the chief's council could be called into secret session as members of this closely knit *Ki La mi* organization.

If one of the members died the fact was kept secret; to the common people he was

merely sick. Even among the members he was spoken of as having "gone somewhere." Necessarily all funeral and burial ceremonies were arranged and conducted by his peers.

Within this group was a still higher group called *Ki Gbuo La mi*, against whom personal insults or violence was considered no less than treason. When one of these men died it sometimes happened that his death was not only kept secret but was, in fact, minimized by making a death mask before his burial. This was carved in wood, as a rude portrait or characterization, and in it his spirit was supposed to find an abode at least reminiscent of its former fleshly habitation — although that spirit was free to come and go between its former haunts and the town of the dead where God the Creator — *Abi* (Gio), *Gɔ* (Mano), *Zena* (Ge and Krā) — was chief.⁵

In this way a man of priestly or, indeed, of "royal" standing, who was highly respected and, as we shall see later, almost worshipped in life, passed by easy stages into the realm of ancestors. And since *Abi* was too far away to be reached by ordinary human beings such an individual became an object of worship as an ancestor. It is easy to understand how the death mask of such an individual would be revered, not only in the name of the man himself, but in the name of ancestors in general. He was more than an intercessor between men and God the Creator. Because he was not far removed in time and space he became very nearly a god himself. It is in this transition of ideas from God the Creator to "a god" who was a recent ancestor that we have the key to the essential religious force which held together and controlled the deepest trends of thought and action of these people.

When the town chief called in the *Ki La mi* they might sit for a while in open council; then, when the evidence was all in, retire inside the chief's house, or behind the fence where no one would hear, and "hang head" in secret deliberation, to decide, like a jury, what the verdict should be. Then they would return to the council and the chief would carry on, finally rendering the decision agreed upon.

In a higher court considering more weighty matters, the chief might postpone the case,

saying that he was not ready to render a decision. The council of elders would subsequently meet at a secret place and decide the matter. The chief would later reopen the case, go through the motions of hearing further evidence, and, guiding the decision of the people to correspond with the secret agreement of the elders, or *Ki La mi*, render the decision.

In cases of offense against society, or against the Poro, or against the cult of the masks themselves, it would be impossible to conduct a public hearing, for the simple reason that to do so would be to reveal certain secrets that the common people must know nothing about. The trial, in such a case, would be conducted by the *Ki La mi* society secretly called to a secret session. The decision was reached and carried out by common consent of the elders without any obvious mechanism. If someone had committed an unforgivable sin, such as desecration or exposure to the public view of sacred relics, there would be no accusation or anything to point to the culprit. He would simply die through poison put in his food, perhaps by his own wife acting under instructions relayed to her through the powerful organization of old women. She would know that her husband was already dead as far as the social structure of the community was concerned. Without asking or caring about the "horrible details" she would simply do what she was told to do, because she knew that if she did not she would herself be eliminated in a similar manner. Indeed, she might know that she was destined to suffer the same fate as her husband anyhow. She was simply caught in a chain of events.

It was entirely possible that the death of her husband would be the subject of a public investigation in which she might be designated as the "witch" responsible for her husband's death. If the trial was by sasswood the same mechanism that established her guilt would automatically execute her. This would almost certainly happen if it were considered that the woman shared any knowledge or responsibility in her husband's guilty act.

This was not the only method of execution for a ritual sin, however. There were other ways of poisoning a man. He might be elimi-

⁵ Schwab, 1947, p. 315.

nated quite openly after the lapse of a suitable period of time, by being found guilty of an entirely different charge, which might even be trumped up to fulfill the exigencies of the situation.

In matters of life and death there was a tendency to manipulate the mechanism of justice and its execution so that no one would appear publicly responsible either for the decision or its execution. The best example of this is the sasswood ordeal,⁶ in which the poison cup, drunk by the accused, was supposed to make its own decision automatically. If the individual were guilty the sasswood executed him on the spot with the same infallible mechanism. There was no judge to be the object of resentment of those who dissented. No executioner whose bloody hands invited retribution by surviving relatives. To make the whole thing still further impersonal, the sasswood ordeal was presided over by an individual whose identity was hidden under a great mask, representing not an ancestor, but the great forest demon. The idea was inherent that it was on his authority this trial was conducted and that he had made this public appearance for that specific reason. There was also the idea that the sasswood tree whose bark had been used to make the poison potion was the real judge of guilt. A detail in the sasswood ritual⁷ refers the whole responsibility to the tree itself.

In lesser matters, through trials by ordeal of various kinds, it is always the mechanism, not the diviner, that takes the blame. It is always "medicine" that does the work, not the operator or the doctor who prescribes the treatment. Of course there are exceptions. There are known cases of the operator coming to trial himself, accused of perjury. In such a case the defense would be that someone else was making stronger medicine. There was always an out, and it was sometimes a matter of who could get there first. But the essential idea remains unshaken, that it was the medicine, or mechanism, or mask, that did the work.

In the sasswood ordeal we have mask, medicine, and mechanism all sharing the blame. In

lesser matters it might appear at first, in some of the examples shown below, that the mask was taking full responsibility. This is partly because we do not have full information about the mechanism used in each case. My use here of the term "medicine" perhaps needs modification. It is really the *mana*, or hidden power inherent in the drug, which does the work. The mechanism is merely to put that power into operation and protect it from contrary forces or powers that would tend to neutralize it; for it is well recognized that if the *mana* of any substance fails to work, it is either because their is present a more powerful opposing *mana*, or because the ritual mechanism has not been properly carried out.

In the case of a mask the inherent *mana* should be considered as the most powerful possible. It was an ancestral spirit, or the spirit of a totem animal, or the spirit of the forest, which might be thought of as the sum total of its animals, real and mythological. In fact, some of the greatest masks, embodying features part animal and part human, seem to represent an attempt to capture the *mana* of both the ancestral spirits and the animals of the forest, with its demons perhaps thrown in for good measure; for its features are half human, its voice and locomotion are human. Its general mien, however, is that of an animal and the animal features are undoubtedly emphasized. Finally, the masked figure is supposed to emerge from the forest and vanish again into its depths without leaving the slightest trace or having any visible habitation.

The system of government was, therefore, a socio-democratic government by chiefs whose authority was reinforced by a council of elders. That council sought to follow the customs and traditions of the clan. When a problem threatened to cause disagreement or a feeling of resentment on the part of the loser or his surviving friends and relatives, the elders sought to obtain a decree (and even the act of execution) from the spirit world itself, through the medium of the mask and the ordeal. This system had the effect of keeping the ancestors near by, and not only vitally in-

⁶ Harley, 1941a, p. 153.

⁷ Harley, 1941a, pp. 155-61.

terested in the affairs of men but able to do something about them! In the last analysis it was government by tradition, enforced by the fear of disapproval of the ancestors. Decisions were reached with the approval of the clan

fathers both living and dead. The living merely used a technique, placing both the responsibility for these decisions and the blame for the administration of justice on the ancestral spirits.

LIST OF PLATES

Frontispiece, Small personal mask, *mā*, of an important man, *zo*.

- I. *a*, Entertainer who may be seen by all, Gompa.
b, *Me fei ge*, ancestral mask with headdress.
c, *Ge Na*, portrait mask.
d, Boys' *ge*, wearing mask, Half-Grebo.
e, Headdress, Gio.
f, Mano dancer's mask and headdress.
g, Headpiece with cowrie shells.
h, Matching belt, part of *ge's* costume.
- II. *a*, Conventionalized portrait mask, Bassa.
b, Conventionalized portrait mask, Krā.
c, Janus handpiece.
d, Mace, carried by *Gɔ ge*.
e, Handpiece belonging to *Wai*.
f, b, k, Replicas of big masks.
g, Twin *mā*.
i, Collection of small *mā's*.
j, *Yongolo to*, carried from the Poro session by last boy.
- III. *a*, Headpad worn under a mask.
b, Small stone adze, called *lai*, owned by *Gonola*.
c, Ring belonging to *Zawolo*.
d, Messenger-talisman of *Zawolo*.
e, Brass chain of *Zawolo*.
f, g, Scarifying hook and razor, belonging to *Zawolo*.
h, *Zawolo's* ceremonial armlet.
i, Knife, messenger-talisman of *Nya*.
j-p, Flute and whistles used to create the voice of the *ge*.

- IV. *a*, *Gɔ ge*, mask of *Gbana*.
b, *Zo ze ge*.
c, *Blɔ ze ge*.
d, *Gɔ ge*, mask of *Nya*.
e, *Du gli*, "cow-eater."
f, Mask of the *Gɔ ge* type.
- V. *a*, *Maa va*, red felt-covered face and headdress, "speaker" of *Nana ge*.
b, *Zɔ ge*, who came to town to stop pestilence.
c, *Nana ge*, a Konor mask with horns and headdress.
d, *Gli dɔ ge*, judge of the sasswood ordeal.
e, *Ma va (ge va)*, a mask with police functions.
f, *Zuo wi nu*, broke pots in town for punishment.
- VI. *a*, *Lu gbo bie*, a judge between lesser *ge's*.
b, *Lu bo bie*.
c, Crocodile mask.
d, *Kma ge*, judge in major disputes.
e, *Pia se*, danced at planting time.
f, *De ge*, diviner and judge.
- VII. *a*, *Ka da ke se*, a powerful teacher and law-giver.
b, God of war.
c, *Die si*, messenger and "speaker" for *Gɔ ge*.
d, *Gɔ ge*, "leopard."
e, *Gbe ge*, judge in cases of adultery.
f, *Ka ge*, "crab," messenger for *Lɔla ge*.
- VIII. Masks of various *Ge's* of the Poro:
a, *Tto bli ge*, swore boys to secrecy.
b, *Gele wi ge*, broke stones for Poro fire.

- c*, *Si kū ge*, "smoke catcher," made fire.
d, *Sa yi ge*, received boys into the Bush.
e, *Tēa bli si*, closed off roads to the Poro.
f, *Dē bu ge*, carried sacred razor into the Bush.
g, *Bō ze ge*, cut out liver of the sacrifice.
h, *Mi gli ge*, Poro executioner.
i, *Dā ya bōa*, dressed the boys' wounds.
j, *Sie ge*, collected supplies for the Poro session.
k, *Tie bli sai*, attacked and plundered passers-by.
l, *Gblō ze ge*, "executioner" of boys who broke the most sacred law of the Poro.
- IX. Petty Gods and Patrons:
a, *b*, Masks commemorating man with facial paralysis.
c, Mask prayed to for cure of gangosa.
d, Patron of victims of jaw tumor.
e, *Dū ge*, "coughing spirit," entertainer and instructor.
f, *Yo ge*, patron of rubbing-chalk for rheumatism.
g, *h*, The stutterer and his "speaker."
i, *Dinga*, "duck," settled domestic quarrels.
j, *Klua ge*, patron of chimpanzees.
k, "The hungry one," collected food for the Poro.
l, *I ye ge*, diviner in war.
- X. *a*, *Di ge*, judged palavers between sections.
b, *Klue ge*, "chimp," ate of new rice.
c, *Nya ge*, "rice-bird," a collector of debts.
d, *Gbā ge*, danced at sacrifice to ancestral spirits.
e, *Ni bli bu ge*, "baby-eater," judicial consultant.
f, *Blō ge*, god of war, immune against gunshot.
g, *Sie dō wana ge*, "fire," attended killing of a cow.
h, *Ldoe ge*, a judge who stopped fights.
i, *Bā ge*, patron of blacksmiths and judge.
- XI. *a*, *Gbea ge*, "crocodile," patron of fisherman.
b, *Mō gbō ge*, collected debts.
c, *Zi bo bie*, "road-making elephant."
d, *Kpo Gō*, Poro judge, much respected.
e, *Kpala*, "lesser hornbill," a judge.
f, A judge from the Konor tribe.
g, *Flō ge*, made medicine for boys in the Poro.
h, Function unknown.
i, *Tō la ge*, executioner for offences against the Poro.
- XII. *a*, *Pā ke la*.
b, No information available.
c, *d*, *Ka ge*, "crab," household god.
e, *Ma die*, patron of rice planting.
f, *g*, Portrait masks.
h, *Gbō ge*, could stop war.
i, *Dra ya bōa*, cared for boys in the Poro.
j, *Ga si ge*, helped clear farm.
- XIII. *a*, *Zena*, prayed to by childless women.
b, *Nya wō*, portrait mask of a popular young woman.
c, *Ti:n gbi*, ancestral spirit.
d, *Gba ge*, danced for a new baby.
e, *Zei*, goddess of fertility.
f, *Longwa*, medicine dancer.
g, "Dancer," true function not known.
h, Figured for artistic interest, no information available.
i, *'Zi*, patron of babies.
- XIV. *a*, No information available.
b, Goddess of the dance.
c, *Di kela*, goddess of victory.
d, *e*, No information available.
f, *Gbini ge*, ancestral spirit.
g, *h*, No information available.
i, *Tō bu ge*, patron of chickens, officiated at burials.
- XV. *a*, Great clay head.
b, Small clay head.
c, Twinned pots.

MASKS AS AGENTS OF SOCIAL CONTROL
IN NORTHEAST LIBERIA

INTRODUCTION

THE thesis that God made man in His own image is reversed when man makes a human image and endows it with godlike attributes. We have seen how easily this came about when a death mask was made for a man of priestly standing. Similarly, a death mask might be made in memory of any famous or gifted individual and prayed to as though the spirit of that individual still resided in it, or at least could be contacted through it. Such a "living" mask was the object of sacrifice and prayer that it would continue to do the work it did as a human being. If this person had been a good provider, his mask might be the object of supplication for good crops and wealth, or success in any venture. The mask of a woman with a large family of healthy children became a goddess of fertility of farm and family. A man who had been a fearless and victorious warrior might be commemorated by a mask which became a sort of god of war.¹ In one instance a woman whose sons had been mighty in battle had her image venerated as a war goddess. For further examples of portrait masks, see pages 39-40.

The outstanding example of such immortalization was the great mask, the most revered object of the cult, which was the conventionalized face of a long dead and almost mythical man of great wisdom, the one who introduced the Poro to this area. This mask became the symbol, talisman, and oracle of the current living patriarch. By reason of being the hereditary keeper of this mask this patriarch was, through its power, the judge and leader of his clan, and as high priest of the mask he could obtain, through it as an oracle, the sanction of the ancestral spirits.

In addition to masks originating as portraits or characterizations of individuals there were masks of different origins — some of them not well remembered or understood by the people themselves. Their secret functions varied from those of clan oracle to personal fetish;

their public impersonations from judges to festive dancers and clowns. Some of them clearly represented mythical, half-human beasts of the forest. A clearcut, simple analysis of their place in the lives of the people is difficult.

Perhaps the easiest approach to an understanding of the masks is to follow roughly the impressions and individual was likely to get through occasional contact with them as he grew up from early childhood to the point where he would be allowed to have full knowledge.

A boy's earliest memory was probably of a time when his mother grabbed him up and ran into the house, shutting the door and staying there kneeling and clapping her hands while weird, sweet music drew near and passed by, accompanied by sounds of many people walking. There might be some other sounds: of someone talking in a high rolling falsetto voice, of a clacking slit drum or a deep bellying musical call, of a voice talking with a throaty gurgling growl resembling a leopard's roar, or of a varied commotion with hushed human voices — perhaps dying down to the sounds of men talking a palaver.

If he were old enough to understand and talk his mother would tell him that this was the *ge* and that he must not try to look out through a crack in the door, because women and children were forbidden to see the *ge*.

Perhaps on such an occasion he would steal a look, or accidentally get a glimpse of a masked figure. Very likely he would see nothing except ordinary men. One thing he *might* see would be a mass of men dancing backward on their heels, or at another time three men in costume leading a winding column in single file in and out among the huts.

There were *some* masked dancers which could be seen by women and children, either in the daytime or at night (pl. I, *a*). These were also called *ge*'s, but they would be a

¹Masks which were prayed to for success in war frequently were adorned by sheep's horns carved on the forehead. Perhaps this signalizes the prowess of

the straight-haired African ram, which can break the horns of a goat. See pl. VII, *b*, and pl. XII, *b*.

boy's second memory, because the other one, from which his mother fled, would be much more impressive. Even as he became more familiar with the masked *ge*'s who danced in public he would periodically be impressed by the generally potent fear of the *ge* which he could not see, and from which he and his mother continued to hide.

As he grew older he learned that a time would come when the *ge* would catch him, as he eventually caught all small boys — would catch him and eat him, or at least swallow him whole.

His father or uncle² might explain to him, as the time drew near, that he would not really be killed but that he would stay for a while in the belly of the *ge*, to be reborn, when the time came, as a real man. If the boy was destined to become a *zo*, or leader, either because his uncle was a *zo* or because he himself had been so designated by a diviner,³ then much more was explained to him. The information was given in secret and gradually, as he became able to understand and to keep the information secret. He would eventually be told that the masked dancers were really men, not spirits from the forest. He would be allowed to see a tiny mask called *mā*, which his uncle prayed to, and he would actually have a small one made for his own personal use. He would be taught how to make sacrifice to it at the new moon and pray to it every morning. He would be told that it represented the "old people" who lived as spirits in "God's town," and that it also represented himself, because he would one day go as a spirit to live in God's town with the other spirits — unless he did some terrible thing which would make his spirit unacceptable and forever an exile, actually annihilated by being universally ignored. He gradually got the idea that spirits needed a little attention now and then to keep them alive, and that if he kept the rules and taboos he would some day have a really fine little mask made for him like his uncle's.

² His cult "father." See Schwab, 1947, p. 283.

³ A child might be designated as a *zo* if it showed any unusual symptoms thought to indicate an innate ability to contact the spirit world; such as epilepsy, *petit mal*, hysteria; or if it had an illness of an unusual nature, such as recurrent convulsions or prolonged unconsciousness. If a diviner decided such a sick

He would also be told about the voice of the *ge* that could not be seen by women. He would know that there was really nothing to see except men making the sound of the "voice." If his uncle were a big *zo* the boy would be shown the pottery whistles, the horn and clay-pot resonator, and other things used to create the voice.

He would learn that the *ge* did not swallow the boys, but that they were taken into the forest, where they lived in absolute seclusion and learned the duties and privileges of full tribal membership, as well as useful trades and occupations. There they would learn also all these things which he, as a *zo*, was already learning from his uncle. The others had to learn the hard way, under strict discipline of masked officials of the Poro or Bush school.

He was told all about the rituals of the Poro, and even instructed in the art of making the "marks of the *ge*'s teeth," or scarification marks, denoting full membership in the Poro. Such a boy *zo* could go into the Poro at the end of the session, just in time to get the marks made on his own skin. Then he could help mark the other boys.

But even a privately instructed boy who was by heredity a big *zo* would not know about the high ritual masks of the clan fathers until he went into the Poro and had a fine little *zo* mask made for him.

A boy who was not a *zo* spent three or four years in the seclusion of the Poro Bush school.⁴ During this time the high Poro officials were masked figures known to him as *ge*'s. They were different, however, from the masked dancers called *ge*'s he had seen in town. The masks of dancers were pretty female faces. Those of the Poro officials were mostly male faces, half human, half forest demon. Their eyes were prominent, even protuberant. Some of them had heavy beards and the mouths of animals with big teeth. Their voices resembled the leopard's growl, instead of the high rolling falsetto of the

child was an unrecognized *zo*, and prescribed "zo treatment," whereupon the sick child recovered, then there was no doubt about it and a *mā* was made for him.

⁴ for more details of this institution, see Harley, 1941b.

dancers. They presided at high rituals, often including a human sacrifice. They administered strict and heavy discipline. These masks will be considered later.

At the very end of the session the boys saw *Gbini ge* as a man dancing with a mask on his face but no costume to cover the rest of his body. He had seen this mask before as a fully costumed "spirit" dancing in town and later presiding at the ritual of scarification in the Poro. Now he was permitted to see that the mask was worn by a man and was not a spirit

from the forest. The boys may already have suspected this but no one dared talk about it. *Gbini ge* carried out his ritual dance as carefully as ever, and when it was over he made a sacrifice to his mask, thus demonstrating that it was the mask, not the wearer, that mattered.

No matter how old or powerful a man became he would never entirely lose his original respect and fear of the spirits symbolized by the masks and the voices. That respect and fear carried through to the masks themselves, rather than to the men who wore them.

THE MASK AS A FETISH

THE close relation between the masks and the ancestral spirits has been established. It is now necessary to consider their similarity or dissimilarity to fetishes.

The native thinks of the unseen forces of life as spirit forces. He includes here much that scientific knowledge can explain by chemical and physical laws, but which to him has all the signs of the supernatural. This realm which is beyond his understanding is still close to him—too close for comfort. It affects his daily life. It is all pervading. Although he does not go around in a perpetual state of terror, yet where he feels the dangerous forces to be concentrated he seeks somehow to protect himself, or to institute measures designed to control these hidden “spirit” forces. These measures tend to become specific, portable, and packaged. Such a package we call a fetish.

West Africa is full of fetishes, but it is not enough to call the religion of these people “fetishism,” and let it go at that. The use of the term, *fetish*, has been so abused that an explanation of its exact meaning should be presented here.

A fetish is usually prepared by a specific medicine man for a specific purpose, and often for a specific individual. The priest must be paid a fee or the fetish will be insulted and refuse to work, saying to itself, “So I am not worth paying for, eh!” In form, or in substance, or both, the fetish embodies the implication of hidden power. It is either shaped to represent some potent being, or it is composed of highly potent material. This physical unity of soul and substance is reinforced by giving it a name. At this point it acquires a living personality of its own—a spirit. It is a “thing” in its own right. This spirit must be respected. It must be “fed” to keep alive. It must be propitiated by prayer, which implies continued faith on the part of the person who is its keeper. The keeper must avoid offending the fetish, and to make this duty a definite one each fetish has its own taboos. If these taboos are observed then the keeper is *en*

rapport. If not, the fetish may turn against him.

If the keeper observes the prescribed ritual in every detail, his request, or prayer, becomes little less than a demand—provided the favors he asks are within the definitely prescribed power of the fetish, and provided further that no one else is at the moment neutralizing the power of his fetish by directing against it a more powerful contrary force. It is assumed that a fetish which has been kept alive, and satisfied, and approached with suitable ritual, *must* respond with all its power in the specific matter for which it was created by the medicine man.

If the fetish fails to respond the keeper may conclude that he, or someone else, has inadvertently, carelessly, or deliberately broken the taboos of the fetish and offended it. If this failure has not already resulted in irretrievable calamity to the keeper, he will endeavor to carry out the proper ritual, “to pay the fine” to the fetish, or make suitable atonement, in the hope that the fetish will be appeased and will once more serve him.

Finally, fetishes can be killed. Most of them will die readily of simple neglect. A more potent one may not be so easily disposed of. Instead of dying when neglected it may turn against the negligent owner. A neglected fetish is, therefore, a dangerous thing. Even the simplest of them will be feared by a stranger who comes across one, for it may be “dead” or it may not. To get rid of a fetish no longer wanted it is necessary to carry it back to the man who made it. For a suitable fee he can reverse the process of manufacture and render the fragments inert and powerless.

A random collection of magical and sacred objects from West Africa would certainly include fetishes, but not even an expert could with any certainty sort them out by their appearance from lesser charms and magical objects. A bit of pith on a cord to be tied to the wrist may have been prescribed by a diviner to protect a child from measles, but that is not a fetish. An antelope horn may be

filled with magical stuff to keep off witches, but this is only an amulet. A sheep's horn may contain a mixture of charred thorns and mild poisons, intended to be licked by the owner, and so to build up an immunity to poison. This is "medicine" and almost a fetish, but not quite. Yet the great fetish of *Dumuma* was a sheep's horn full of black stuff!

A fetish must have a name, an indwelling spirit, a "law" or taboo, and a ritual, as well as a specific purpose and power. The spirit of a typical fetish is the composite spirit of the several substances from which it is made, each with its own inherent power. A bit of stone for strength; some smooth bark from the invulnerable tree which is so slippery that even monkeys cannot climb it; a leaf caught floating in mid-air, for fleetness of foot; fruit known to contain a heart stimulant, for endurance — these might be incorporated in a *good* fetish to give a young warrior confidence and power. A list of ingredients for a *bad* fetish might sound like a recipe for witches' brew.¹ But a truly great fetish would contain substances from the human body, preferably from the heart, forehead, and larynx. It would have to be fed with human blood or fat.²

Outward form also contributed to the power of a fetish. A knotty vine, or a woody excrecence with a profile suggesting a human face, became almost a fetish in itself. If circumstances suggested a name for it, and trial and error pointed to an apparent taboo, it needed only that an occasional sacrifice be made to it to keep it alive and to establish it as a true fetish. Its proper function would have to be "discovered" by a diviner. This type of fetish, having presumptive power in its form rather than in its component substances, is comparatively rare.

Of fetishes which are representations of the human face, the more frequent were not found as natural formations but were carefully and deliberately carved from wood. This carving was either a portrait of an individual or the conventionalized face of a woman. The portrait mask was supposed to attract to itself immediately the spirit of the individual ancestor. The conventional form became inhabited by the great ancestral spirit — a sort of

earth-mother ancestral goddess. The details of this ideology are not clear, but the conception is contained in the great *Mā* of the Poro, referred to as the "mother of all masks," and in the translation of the word Poro as "the earth."

To carve the likeness of an animal would likewise invite the spirit of such an animal to inhabit the wooden image — with unpredictable results. One did not indulge in such promiscuous creation of spirit abodes. There was too much risk involved. By common consent it was taboo for any layman to make any likeness of any thing in earth or sky or sea. Such carving could only be undertaken in great seriousness by one who knew the rules and was authorized to make a particular piece.

This prohibition, reminiscent of Mosaic law, reflects less a fear of the one true God than a fear of all the spirits; but it should be remembered that the greatest fear of all was directed towards the likeness of a human face — the ancestor mask.

By our definition, therefore, a mask may be considered a fetish, but it is something more. The spirit in a mask may be addressed by name. It is the object of sacrifice and prayer. It has taboos: no woman could see or know the mechanism of its wearing, and some masks had their own taboos as well. There is a feeling that the mask will not fail to perform its accustomed function. In all these respects it can be called a fetish.

But the mask was not considered likely to be neutralized by a counter force working against it. If a mask did not do its work it could only be because it had been neglected or because someone had broken its law. "Owners" of the clan masks might compete for prestige and for new territory, but there was no opposition of function between their respective masks.

A fetish might be made with a distinctly evil purpose. There were no masks that deliberately brought disease, calamity, or death as their fruits. Disease and death were firmly believed to be brought on by living people, perhaps with the aid of a "bad" fetish or "witch" substance or actual poison. A mask might be invoked to discover and remove such persons, who were considered public enemies.

¹ Harley, 1941a, pp. 143-49.

² See p. 8.

The final distinction that made a mask something more than a fetish was the belief that the mask could not be destroyed with impunity. It was impossible to have it destroyed by reversing the process of its manufacture. If a large mask were accidentally destroyed by fire or decay a small replica had to be made, in which the spirit of the big mask might rest (pl. II, *f*, *b*, and *k*). If an individual lost his small personal mask he might have another made, but the lost mask constituted a

terrible potential threat to his peace of mind and his very life. He would be like a spy who had let his confidential papers get out of his possession.

Upon the death of the owner the small personal mask might be buried with him or given to his son as an heirloom, or perhaps returned to the man who carved it. It might be inactivated by rubbing it with oil, but still it had to be cared for and put away where no woman would ever see it.

SACRIFICES

For an appreciation of the common practice of "feeding" a fetish or a mask it is essential to understand these people's conception of sacrifice, which, in turn, hinges on their conception of the life force. The Mano recognized three souls in a man, the first of these being identified with the intelligence. When a man lost consciousness or became insane they said: "He is not a person any more. The person himself has gone before." But there remained a second soul, the dream soul, for the person could still move, talk, even though irrationally; and a third, which departed with the breath. They watched these souls leave the body in succession. Sometimes the unconscious man "came back." The apparently dead sometimes revived. The body, therefore, was not to be disposed of too quickly. One or more of its souls might still be interested in it.

When the souls had finally gone, what was left was still the form and substance of a human being. Sometimes it used to be eaten as food without significance beyond the satisfying of bodily hunger. When it was used *ritually* as food, it satisfied more than bodily hunger. It then became a substance of potent soul-feeding power. (The more recently the person had died, the better.) For this purpose any part of the human body would serve, though certain parts were more powerful than others. The most powerful was the blood. It was usually the substance used to "feed" ritual objects.

We see here a link between food-substance and soul-substance which to the native was very real. Various substances could be "eaten," either literally or ritually, to reinforce hidden spiritual power. Of such substances, meat and

bone of the human body were the most powerful, and could, indeed, augment man's own soul force. Also of high potency was the meat of the powerful man-eating animals like leopard and python. Eating these a man absorbed something of the spirit inherent in the animal. Such powerful meat was suited only to those who needed unusual power — the priests and the warriors.

When a sacrifice was killed it was "eaten" by the living priest, the ancestors *and the ritual object involved*. This was accomplished by offering some of the meat to the ancestors and smearing the ritual object with some of the blood. By the sacrifice all were equally bound in a covenant of continued cooperation. The inclusion of the ritual object in the covenant demonstrates that it, too, was conceived as having a soul of some sort.

It should be emphasized that no sacrificial procedure was complete without "prayer" that began with a statement of the reason or occasion for the procedure and ended with the covenant binding all parties. Included in the prayer, or implicit in it, was the assurance that the priest had faith in the power toward which the sacrifice was directed.

This conception of sacrifice explains the "feeding" of fetish and mask — usually at each new moon with more formal sacrifice once a year. As the object of sacrifice and prayer a mask becomes a fetish of a high order, embodying the spirit of a living man or of an ancestor or forest demon.

The most effective sacrifice was a man's own eldest son — not so much because he represented the greatest renunciation, but because it was assumed he would carry the message to

the ancestors better, and would remember, after he got to their realm, that he could render his father a special service. He became at the same time son and "ancestor" and would continue to be interested in his father's affairs on earth longer and more vitally than would, for instance, a slave boy.

The spirits of those who have gone before are not terribly concerned with the affairs of human beings still alive, but they are not wholly unwilling to help if they are approached in the right way. They must be flattered, cajoled, and occasionally subjected to a bit of pressure to remind them that they are able to help their earthly connections a great deal if they will only take the trouble to do so.

Except for the highest of all sacrifices, a slave might be substituted. In recent times there is ample evidence that the slave was, in turn, replaced by a cow. For lesser sacrifices, the next official substitute was a sheep, then a white chicken, then white cola nut, chewed up and spewed on the sacred object. If no white cola were available, cold water could be used, not as a substitute sacrifice, but as a token, accompanied by the promise of suitable sacrifice "next time." This step-by-step degradation of sacrifice explains the significance of spewing water out of the mouth onto the ground by many African people when offer-

ing prayer to the ancestral spirits. Finally among the Mano people, at least, when offering daily prayer to the small *mā*, it was customary, merely to spit on it. This was considered sufficient provided the act were reinforced by sacrifice of chicken blood once a month. If this were inconvenient, water could be used.

White clay around the eyes of a mask was also a sort of a sacrifice, as well as a decoration. In several instances such application was made with instructions something like the following: "You are going far away, we want you to agree to go to America and do your work for the people over there." This was to assure the mask that its spiritual qualities were not being forgotten. In other cases it was apparently done to revitalize a mask which had been unused for some time.

Masks may be considered under four general types: (1) the small individual mask called *mā* and its Poro prototype which was called the mother of all masks; (2) the great oracle mask or "god spirit"; (3) the masks which functioned as public officials; and (4) those appearing as entertainers, dancers, or clowns. In the Gio country there was considerable overlapping of these types, but this classification will serve as a basis for studying the masks of the entire area of northeast Liberia and adjacent territories.

THE *Mā*

Each man of importance in the community had one of the small carved wooden masks called *mā*, just big enough to fit into the palm of his hand (frontispiece). No one but the owner was supposed to see it except when high ritual required him to show it. A woman must never be allowed to see it or hear its name. The *mā* needed a sacrifice of a chicken each new moon.³ It was prayed to every morning by its owner, with a short petition for good luck and protection from "witchcraft," which was supposed to be the cause of accidents.⁴

Wai, the cult mother of the Poro, who was actually a woman but ritually a man, partici-

pating in the Poro sessions with men, also had her personal *mā* and was keeper of the great *Mā* of the Poro. Her special symbol was a little Janus handpiece (pl. II, *e*).

Boys who were to become *zo*'s, either by inheritance or by special decree of the diviner, were given *mā*'s while still young. If a diviner decreed that a girl child was a *zo*, entitled to become a *Wai*,⁵ she also might be given a *mā*. The *mā* of a *zo* child was wound about with cotton string and kept by the child's mentor until the child was old enough to be taught how to care for it, pray to it, and help make the monthly sacrifice necessary to keep it active.

³ Schwab, 1947, p. 278.

⁴ Schwab, 1947, p. 381.

⁵ Harley, 1941b, p. 12.

During the Poro session each boy of a "professional class" family got a *mā* of his own, which he was taught to revere and worship. An initiate who was a *zo* and already had a *mā* of his own was given a new one along with his new name.

Some of the big men who were *zo*'s also got new masks to mark their acquisition of advanced "degrees," or their admission to the inner circle of elders known as *Ki La mi*, or the still higher circle of *Ki Gbuo La mi*, or peers.

A small *mā*, being a kind of portrait of its owner,⁶ was by that fact a place where his own spirit was represented. It was also a place where he could contact the spirit world in general and the ancestral spirits in particular.⁷

The childhood *mā* was not very carefully made. It was merely necessary that it represent a human face. The *mā* made for a Poro initiate was supposed to be a sort of portrait, or at least have some character. A special one made for a medium who could go into a fit of hysteria or a trance and answer questions put to the ancestral spirits was very carefully made. It was of a conventional type with the oval face of a woman and resembled the big *Mā* of the Poro which was the mother of all masks. A special *mā* made for an old man on attaining distinction for any reason was definitely a portrait of the owner, and if for a big *zo* it had a coronet representing a row of antelope horns or a plaited headpiece.

The idea that the *mā* represented the soul of the owner was difficult to obtain and verify until one turned up belonging to a twin. It represented a dual personality (pl. II, g). To understand its significance it must be understood that twins of the same sex were thought to have one "ancestral" soul between them, and nobody could be sure which twin housed that soul at any given moment. Everyone was meticulously careful to treat them both exactly alike for fear of offending the soul should it happen temporarily to be in the neglected twin. They had to be fed the same food at the same time. Any gifts were in duplicate. To obviate this procedure, which was difficult to maintain throughout their life, the death of one twin was welcome, and was usually con-

nived at, with the help of a diviner who supplied "medicine" to be given both twins to drink in the bath water. The weaker twin usually succumbed. Even then precautions were sometimes carried to the extreme of making a wooden image of the deceased twin and making further occasional identical presents, one to the surviving child and one to the image. Usually, however, the dead child was put into a termite hill, which was supposed to be a place no soul of any kind could survive. The soul was therefore firmly fixed in the surviving twin, and all was well. In the case of mixed twins it was even more complicated. The soul was a double soul. Usually both twins succumbed to the "twin medicine" in the bath water. The twin *mā* pictured in plate II, g, with two noses and two mouths, belonged to a survivor of mixed twins. It represents his double soul and confirms the idea that the *mā* is a portrait of its owner.

When a man died his *mā* either had to be turned over to someone who would care for it, or put on top of his grave. His son or nephew might keep it, or it could go back to the carver who made it. Such a man might collect several and in turn leave them to his son. One such collection of twelve finally was obtained from a grandson who no longer revered them and who needed some tax money.

During Poro sessions a larger *Mā*, plate II, j,⁸ seven or eight inches long, was kept on a winnowing tray inside the inner portal of the sacred enclosure. A neophyte's first ritual act after fighting his way past the masked keepers at the outer portal was to swear to secrecy on this *Mā*. Initiates of all ranks swore on it that they had abstained from sexual activity the night before and that they brought no "witch" or evil intentions into the Poro. The Poro was a place of abstinence and peace. Within its sacred precincts all personal enmities were supposed to be forgotten. While the Poro or Sande (the girls' school) was in session war was taboo.

The *Mā* of the Poro, called the mother of all masks, always had a woman's face. It was identified with "the earth itself," and with the

⁶ See p. 4.

⁷ See p. 4.

⁸ See also footnote 41, p. 28.

ancestral spirits. The Poro was thought of as a place of the spirits. During their residence in the Poro the boys were supposed to be spirits "inside the belly of the *gɛ*" and invisible to outsiders.

This big *Mā* of the Poro could not be trifled with. Its keeper, *Wai*, was cult mother of the Poro. She and her consort, *Gonola* (see below), had power of life and death over the

neophytes, and that power was exercised in the name of their masks. When a culprit escaped and fled for his life *Wai* could "put his name in her *Mā*," then send the mask as her messenger to the clan or tribe where he had hidden. The entire power of the Poro, which extended beyond tribal boundaries, could then be invoked to bring him back to justice.

Gɔ Gɛ⁹

As mentioned above, there were actually two systems for controlling or governing the people. One system functioned openly through town chiefs and elders with their palavers and councils which gave everyone a chance to participate in a more or less democratic manner. The other system was actually an extension of the men's cult which had its highest development in those tribes which had the Poro. This system functioned in secret through a high council of elders meeting at night in a sacred place, called together and presided over by the *gonola* or "owner" of the land. The *gonola* was also a high priest in that he was the keeper of the great mask referred to as *Gɔ gɛ*, "good spirit." When there was to be a meeting of the elders he carried this mask to the secret place, laid it on a mat on the ground, and covered it with a white cloth. Around it the elders sat and discussed the special palaver for which they had been called together by the *gonola*, who acted as chairman. When they had discussed the case fully the chairman guided their opinion into a judgment, which was tentative until approved by the mask, *Gɔ gɛ*.¹⁰ In arriving at this decision the owner exercised the function of judge or chief justice.

The functions of *Gɔ gɛ* included that of lawmaker, since the session of elders hearing a case and rendering judgment would often de-

cide that a decree was necessary to proscribe similar offenses. Such a decree, announced by the town crier, had the effect of law.¹¹

This *Gɔ gɛ* mask is the great mask of the Poro referred to elsewhere as the *dumuma* mask.¹² It had some of the attributes of a living god when worn, and those of a sacred oracle and supreme judge at other times. It was the object of blood sacrifice and prayer. When it changed hands from father to son, or more properly from uncle to nephew, a high sacrament was eaten. In old days this was a human sacrifice to liberate a spirit to carry word to the town of the dead that the mask had a new keeper, a new high priest. It was appeased by the sacrifice of a chicken every new moon, and a sheep on occasions when a high palaver was to be talked.

Masks of this type are very rare in museum collections. Information including their names and functions is almost entirely lacking. Names given me were *Gɔ gɛ*, *Tɔ gɛ*, *Bu na gɛ*, *Zo zɛ gɛ*, *Gbo lɔ zɛ gɛ* (all Mano); *Wai wɔ* (Kpelle); *Gɔ glü*¹³ (Gio); *Nana* (Konor); *Kna gɛ*, *Zena* (Krā).

They are characterized by protuberant eyes faced with perforated china or metal discs, red felt lips, a long beard hung with calabar beans, palm nuts, or heavy glass beads. As evidences of sacrifice they usually show black dried blood caked over the face and reddish

⁹ *Gɔ gɛ* is the mask referred to by Schwab as the Big Devil, though he used this term in a very general sense to include the central idea of the *gɛ* who is neither a person nor a mask. It is better to use the term *Gɔ gɛ* in reference to this mask, though it went by different names, especially among those who did not know its real function. For some of these names, see below. The term "devil" or "country devil" is applied to the masks, and masked figures by English-speaking Christian Liberians.

¹⁰ For details of the procedure, see p. 16.

¹¹ Sometimes other masks than *Gɔ gɛ* enjoyed the privilege of judging and making laws. See p. 17.

¹² In Harley, 1941b, p. 9, this term was used because I had no other name for the mask, though I had actually acquired one under the name *Gblɔ zɛ gɛ* with incomplete information as to its function. The term *dumuma* should correctly be used to refer to a fetish owned by *Gonola* or *Wai*, not a mask.

¹³ The Gio word *glü* is equivalent to the Mano word *gɛ*.

remains of chewed cola nuts spewed into its mouth by the priest. Among the many masks collected by the author, this Mano *Gɔ ge* is the most interesting, and is also the one about which the most definite and the fullest information is available.

The owner of a *Gɔ ge* mask, here referred to for convenience, under the Mano name, *Gonola*, customarily received the high office and custodianship of the mask from his own father in a sacrament, accompanied by the sacrifice of his eldest son. *Gonola's* consort, *Wai*, also partook of this sacrifice. These priests ate the sacred parts, the forehead, heart, and larynx.¹⁴

Gonola also held command over all lesser *Gɛ's* in the clan. He could send them out as his messengers, policemen, or deputies. With the help of *Wai*, he controlled all activities of the Poro and the Sande.¹⁵

He had power to stop war and fighting and could severely punish any breach of peace in the clan. His people could not make war without his consent. He and *Wai* together could plan war, or raiding parties so that they would not interfere with the sessions of Poro and Sande.

He sanctioned and assisted in the creation or installation of a new *zo*.¹⁶ As owner of *lai* (see p. 15), he called all the *zo's* of the Poro scarification ritual to sharpen their ceremonial razors on its edge.¹⁷

As a priest it was his duty to superintend the making of a new mask and its costumes.

When a mask was to be made the wood carver took his instructions from *Gonola*. A suitable tree was selected, and a sacrifice prepared for the propitiation of the tree. At the time of the sacrifice the tree was addressed and informed of the purpose for which it was proposed to use a portion of its wood, and a day was appointed for the felling. On that appointed day the tree was cut without further ceremony. Then it was allowed to lie for a few days just as it fell, "to get used to the idea." The idea in all this was that the stuff of the tree itself must be willing, otherwise the carving was likely to be spoiled before it was completed.

A few days later a chunk was cut off, and carried to an isolated hut in the forest, all roads being guarded or closed by taboo signs during the time the actual carving was being done. No woman was permitted to come near the place.

The kind of wood to be used for carving a mask was not fixed. For large masks a light wood was desirable. Cotton-tree wood (*Bombax buonopozense*) was usually preferred, though cork-wood (*Musanga Smithii*) was often chosen, and wild rubber (*Funtumia elastica*) was sometimes used because this wood was easily carved, and did not split readily.

If a high polish and fine permanent detail were important, a heavier wood was used. Close-grained varieties such as *Sarcocephalus Diderichii* were preferred. *Chrysophyllum perpulchrum* was a favorite with Mano artists. Durability, ease of carving, and resistance to cracking were requisites. Rarely an open-grained wood (*Chlorophora excelsa*) was used and the natural finish allowed to stand, but usually the character of the wood was concealed by the black coating of plant juices. In addition most masks acquired a patina composed of dust, smoke, and sweat rubbed into the surface by years of handling, and storing in the loft.

Tools used for the carving of the masks were the ordinary native axe, adz, and knife. Sometimes a knife was bent on the flat to scoop out hollows. The blacksmith's burning-iron was used for holes: eyes, tooth sockets, perforations for tying on the corona or "hair-do," beard, moustache, etc. These latter were sometimes nailed on with iron or brass nails, or pegged with hardwood pegs.

The smooth finish of the masks was achieved by shaving and scraping the wood down with a very sharp knife, then rubbing with leaves of the fig, *Ficus exasperata*, which are covered with microscopic hooked spines, more efficient in this work than sandpaper.

The black color and final polish was accomplished by repeated applications of a vegetable mixture, whose chief component is the leaves of the Calabar bean, *Physostigma venenosum*.

¹⁴ Harley, 1941a, p. 132.

¹⁵ Harley, 1941b, p. 31.

¹⁶ Harley, 1941a, p. 132 and Harley, 1941b, p. 8.

¹⁷ Harley, 1941a, p. 132.

This mixture was concentrated by boiling to the consistency of a thin paste which penetrated the wood to some extent, yet had enough body to fill tiny defects and pores in the wood. Its application and action was rather like old-fashioned liquid shoe polish. When it dried it could be rubbed to a high luster with the hand or a bit of rag. This concoction seems also to help protect the wood against decay and attack by insects.

The iron spikes sometimes driven into the chin and the crest of the forehead ridge were for extra lashings which served to secure to the mask the hood and the shoulder cape, or "shirt," which were "sewed" through the holes around the edge of the mask. Only one rule governed the arrangement of these accessories: no part of the wearer's anatomy could be exposed to view.¹⁸

The work of the carver was not referred to as a mask until it had been finished. Then it got its name, and was consecrated by a sacrifice to its newly acquired "spirit." If it was a portrait mask, the sacrifice was directed to the deceased person as his spirit was to come to inhabit the mask. (Details are not known concerning the procedure in those cases when a portrait mask was made while the person was still living.)

The position which the owner of the Gɔ gɛ mask held in the Mano community, and his secret ritual functions, can fortunately be illustrated by accounts of four actual known persons. The names given are, for obvious reasons, fictitious.

SEI

Sei was a man widely known for his power and independence. The fact that he was paramount chief up to the time of his death reflected his complete control over his people. He was *gonola*, also called *lekola*, hereditary "owner" of the land in the name of the clan. He was also owner of the forest, including the sacred grove¹⁹ where the Poro and Sande had their sessions. The Poro Bush was on one side of the town, the Sande Bush on the other, each at a respectable distance but within sight.

Neither Poro nor Sande could make preparation for a session without the mutual consent of Sei and *Wai*. He was *ex officio* commander of every secret organization of the clan. The masked *gɛ*'s of the area operated directly under his instructions. He possessed the great fetish known as *dunuma*, and the Gɔ gɛ mask that often went with it.²⁰ Into his keeping was given the personal medicine of any big man who died. This both indicated and strengthened his association with the realm of departed spirits, and so with the "old people" or ancestors.

In his function as owner of the land and the bush he could effectively bind the people to the home soil of their fathers. He could send a messenger to call a man back, wherever he might be, if that individual were involved in any matter of public interest. If the man refused to come, he became an exile, liable to be caught and sold into slavery by any aggressive individual unless the association of elders of whom Sei was the head gave some indication that the man was still under their protection.

Sei could also enforce exile as punishment for incurring his displeasure. Once when the son of a family in his town joined the Poro of a neighboring tribe instead of the local "chapter," Sei banished the family, which meant they had to leave his area and live forever after as foreigners in the other tribe.

There was a spot on the trail marked by three great trees and three sets of fire stones where Sei had met with the corresponding judge from the next clan to settle a boundary dispute. There had been cooked and eaten a great feast in which all the old men in the area took part in order to sanction and bind the agreement.

Wearing his sacred mask Sei could walk into a session of the Poro where a quarrel was brewing, say, "*Dunuma*," and stop the men in their tracks. At that word all present would prostrate themselves before him, none daring to rise until he was touched on the back with a bundle of small sticks that Sei held in his left hand. If anyone deserved punishment he might be left there all day. Anyone daring to get up would be killed.²¹

¹⁸ Harley, 1941b, pp. 8, 10, and 11.

¹⁹ Harley, 1941a, p. 129.

²⁰ Harley, 1941a, p. 171.

²¹ Harley, 1941b, p. 9.

Wearing this mask he could stalk between two fighting bands and command them to stop.²²

When Sei died government regulations denied him the traditional secret burial which was his due. But the night after he was buried publicly a score of men privileged to exercise the function of creating the effect known as the *ge*, gathered in the compound where he had died and all night long kept up the plaintive flutelike music of the pottery whistles, the throaty musical bellowing of a deep baritone voice chanting into a clay-pot resonator, the high rolling falsetto of a man talking through a blowing drum, and the guttural bubbling gurgle that represented the forest demons. During this time no woman could leave the house in which she was hidden, except *Wai*, ritually a man, who was privileged to come and go as she pleased.

These makers of music and other manifestations of the voice of the *ge* wore no masks or any other emblem of ritual. In fact, it is barely possible that they were all stark naked. At least in the old days they would have been, for they were in the presence of a new ancestral spirit.

In recognition of this fact at Sei's public funeral his friends and relatives had addressed him by name as they stood by the open grave to throw in a cloth or some other tribute. They each made a prayer to him as a departing spirit.

"Let us have good crops."

"Let us not disagree about the division of our inheritance."

"Let us find money to pay all your debts."

"Let us prosper."

"Give us many children."

The master of ceremonies, who in this case was a civilized young man, had taken a palm nut and put it in Sei's hand, talking to him and asking him for good crops: "Let our seed rice germinate and multiply."

This palm nut was afterward taken and carefully hidden in the seed rice. Part of this was to be mixed with the seed rice of all the people.

NYA

Nya was another *gonola*, owner of the land and the forest, as well as keeper of the *Gɔ ge* mask (pl. IV, *d*) by virtue of which he was supreme judge of his clan. When exercising this function he actually wore his mask, with suitable costume completely covering him, even his hands and feet. He was dressed by the old men inside his own house and sat as judge in a near-by palaver kitchen inside the fence that enclosed his private quarters in town, guarded against all but the old men. Here would be brought to him important cases, such as the shedding of blood in a fight between two men.

Only the elders were present. The palaver was talked through an interpreter, since the mask spoke a secret language, with a few Mano and Kpelle words included. He spoke in a high rolling falsetto voice. If the culprit had shed blood with a knife he was fined one cow plus ten cloths. If he and his family could not pay on the spot that same day, his fine could be paid by someone else, in which case the culprit became the slave of the man who paid his fine. If no one spoke up the culprit was killed secretly in the bush.

If a cow was paid it was taken that night to a cleared area in the bush reserved for such purposes. It was killed, cooked, and eaten by old men assembled from all the towns within the clan. The feasting and talking continued all night. When they finished eating, the old men sat and talked, discussing any new laws and regulations appropriate to the occasion. These laws were recited to the young men by town criers at dawn the next morning. The *Gbini ge*, who was *Gɔ ge*'s speaker (pl. XIV, *f*), danced in the chief town of the clan. In the old days, if the cow was not forthcoming, the culprit himself undoubtedly constituted the *pièce de résistance* for the feast which was held in the bush.

Nya's *Gɔ ge* mask did not dance. It did not walk about. It merely sat in judgment. When the trial was over the big men undressed the wearer and Nya himself attended the feast.

²² The functioning of the keeper of the mask as high priest and judge will be brought out in detail

with respect to other "owners." See especially pp. 14-17.

On other occasions Nya undoubtedly carried the mask with him to secret high councils, but at these times the mask was not worn. It was taken along to insure the presence and approval of the ancestral spirits. Furthermore, in its presence no man could tell a lie. No woman or small boy ever saw it.

This Gɔ gɛ mask had been made for Nya's father about the year 1870. When he sat in judgment wearing it he held a great iron knife in each hand (pl. III, i). When he went to the feast he ate with his left hand from a peculiar wooden bowl with a handle, carved from one solid piece. Only heads of the great families were permitted to dip their left hands into the bowl with him.

When the Government took control Nya was recognized as chief, and so he remained for two years. But he was a dignified and retiring individual and at the end of this time he was replaced by a more aggressive and younger man. When Nya became chief for the Government he put his mask away in a box and used it no more. After his death the mask, his knives, and wooden bowl came to me with this bit of information concerning their use. They came by consent of Nya's son, who knew nothing of their proper care and, being afraid of them, was actually grateful to have them find a sympathetic resting place in the museum.

As *gonola*, Nya was lord of the Poro and Sande. Together with his consort *Wai* and his speaker *Gbini gɛ* he was responsible for the safe-keeping of the masks of all the other *gɛ*'s. These, with other Poro property, were formerly kept in the loft of a sacred house or kitchen a short distance from town. This kitchen was inside the sacred Bush, near the place where the Poro sessions were held but some distance from the place of feasting. It was surrounded by a fence to keep out cows and other animals. No women or boys were supposed to go near. It was here that all the lesser *gɛ*'s were dressed in their masks and costumes. In the kitchen itself a fire was kept burning every day. Here the old men were accustomed to gather and talk petty palavers. Poro initiates of lesser importance could also

go there to sit and loaf and drink palm wine, but they could not go into the loft.

Besides the fetish *dumuma*, Nya had a *lai* ("sky stone," a small stone adz) on which the *zo*'s of the Poro sharpened their ceremonial razors.²³ Because he had *dumuma*, he superintended the making of new masks, as when a big *zo* died and a mask was made in his memory. (No sacrifice was necessary to consecrate such a mask, because the spirit of the *zo* just dead was supposed to go into the mask.²⁴) He supervised the making of new costumes for *gɛ*'s. Any *gɛ* wanting to dance in his towns had to get his permission. This referred to *gɛ*'s from other sections, for the *gɛ*'s of that section were sent out by *Gonola* himself. They were his messengers, policemen, and henchmen.

As owner of the forest he was owner of its animals. The leopard, elephant, python, and crocodile were his. Any hunter killing one of these had to turn it over to him. In other sections the great barred eagle is also sacred to the owner of the forest.

The hunters would bring a leopard back to town on a litter, its head covered with a black cloth so no woman could see its face. Laying it down before Nya's house they would call him and say, "We killed this thing in the forest but we don't know what it is."

Then he would say, "That is a leopard."

They said, "Oh, is that a leopard?"

Not until he named it, could they refer to the animal as a leopard.

A python was brought in the same way except that its head was cut off so no woman could see it. Elephants were so scarce in that section I had no opportunity to find out what happened when one was killed. I think Nya would have gone into the bush where the elephant had been killed.

Nya's area included seven towns. He did not cut farms but received tribute from each of these towns.

He was the one who met Sei on the road to discuss the boundary palaver. In the other direction his territory joined that of another man in a similar position, whom I also knew personally. He is described here as Zawolo.

²³ See pl. III, b.

²⁴ See pp. 8-9.

ZAWOLO

Zawolo was also a *gonola*. His territory included some seven or eight towns. The mask which he cherished as his sacred connection with the ancestral fathers had been made for his great-grandfather Yini, who handed it down to Yembe, who was succeeded by Kele, who was Zawolo's father. It was made about 1830, possibly earlier. Yini, in his time, fixed the place where he would meet a similar man from still a fourth section to talk high palavers. Because this man's mask was made after Yini's it was inferior in prestige, so that Yini's word was final in any difference of opinion.

When the elders were to be called for such a palaver the messenger would go to all the towns of the clan, warning all the women and children to go inside the houses. Another messenger, following soon after, carried in his hand the talisman of Zawolo himself (pl. III, *d*). He would tell the old men that they were called for a meeting. Only the *Ki La* men would be so summoned. At this time every man in all the towns would be warned not to get into any kind of palavers. This was done two or three days before the time set so everyone could be at peace with his neighbor and remember that weighty matters were to be discussed.

If the messenger carried Zawolo's razor in his hand instead of the usual tongs then the big men knew that a culprit was to be tried for his life. The inference was that someone had "spoiled" an unbreakable Poro law, and that the death sentence was likely to be passed regardless of how much he or his people could pay to get him off.

The place of meeting was called *Bu kpanala*. The old men assembled at night. A fire was built and all gathered around. When the matter involved both clans there were two groups, each with its high priestly judge who had brought his *Go ge* mask with him, wrapped up in a black cloth inside a box or basket. When they were ready guards were placed on the roads to insure secrecy. The masks were taken out and each was placed on a mat in its prescribed place and covered with a white cloth. Four cowrie shells were placed in a row at each side.

Zawolo then sat behind his mask. On his left

fourth finger he wore a big brass ring (pl. III, *c*); on his left arm, an iron armlet (pl. III, *b*); on the left wrist, a brass chain of intricate design (pl. III, *e*) which was an amulet of *dunuma*. These fetishes were supposed to give him power and wisdom. The mask in front of him was "to see how the other judge would cut the palaver." Apparently the keeper of the other mask, being secondary in importance, would hear the case, and Zawolo would be the one to have the final word.

After the old men had talked the case through and reached their decision Zawolo would uncover the mask, call it by name, and review the case, telling the mask:

"We have decided so and so. We want to know if you agree with our decision. If you agree let the cowrie shells fall up. If you disagree let them fall down."

Then he would take the shells and throw them like dice on the mat in front of the mask. The decision was supposed to be the decision of the ancestral spirits and it was final.

In ordinary life Zawolo was a physician, specializing in stomach troubles. It was he whom I once called in consultation and we agreed that the patient had an abscess of the liver. We drained it and the patient recovered. From this incident developed a friendship that lasted through the rest of his life. He taught me much of the native lore, and the use of herbs. In his last illness he came to me for treatment. When finally we both realized that he could not live long, he sent me his mask and other sacred relics and gave me the stories of how he had used them, then he went home and died.

I have never known a man more dignified and gentle, and I was a little surprised to learn that in the old days he had literally had the power of life and death over his people, for, as keeper of the great mask, he was a judge from whose decisions there was no appeal. The casting of lots before the mask was something of a formality. These old people were too sincere to decide everything by throw of dice upon pure chance. Old Zawolo knew how to throw them to get the answer he wanted. If he got an answer that did not suit him he could always invent an excuse for reopening the question and giving the cowries another throw.

GBANA

Gbana, the fourth "owner" of whom I have some information, was a grand old man with pure white hair when I last saw him. He always had a kindly smile. At the height of his influence he was judge for a total of nine towns.

When there was an important palaver to talk Gbana's messenger was sent to notify the old men. Anyone who failed to come was fined one cow. After they were assembled Gbana came down the path, preceded by a special messenger blowing a flute. When the flute was blown the assembled elders became very quiet. He brought his big mask (pl. IV, *a*) with him and put it on a mat as described above. This mask had been made for his grandfather about 1850.

Sometimes the council would be called to consider the making of laws or decrees considered necessary under the circumstances. Perhaps a town was not prosperous, or people were running away to other sections. Perhaps the young men were refusing to take responsibility in public affairs. Sometimes the chief was not receiving due respect, or the older men needed to be impressed with their responsibility toward the younger people.

Because of the isolated position of his towns, Gbana continued to use his mask and hold

these councils for some time after the purely administrative responsibilities had been taken over by the central government of Liberia. These practices were not discontinued until 1938, some fifteen years after the area had been brought under control of the District Commissioner. In this case we have a man who was wise enough to adjust a native institution to the new conditions.

In the old days this mask and its keeper had discussed Poro and *ge* palavers. It had seen men tried and condemned to death. It had been smeared with the blood of any person executed because he had broken sacred laws. Almost one hundred years ago it had been made and consecrated by human sacrifice. During the first years of its existence it had been "kept alive" by similar sacrifice every year in the middle of the dry season. Later a sheep had been substituted for the human sacrifice. The number of victims who fell before its stern judgment is attested by the number of calabar beans and palm nuts tied into its beard.

It is hard to reconcile the gory history of this blood-stained mask with the benign clear-eyed patriarch under whose tutelage I myself once joined the blacksmith's guild. I can only do so by regarding him as a high priest, worshipping his ancestors in the manner which custom demanded.

OTHER JUDGES AND LAWGIVERS

The four Mano "owners" described above ruled their people with considerable power and prestige. Each was a big man in ordinary life, but a bigger man because of the secret power conferred on him through the ancestral mask of which he was the keeper. To help him in his work of judging and ruling his people, each had a number of associates who were of some importance in daily life; but they also were of more importance when they functioned as wearers of masks. Most of these masks had rather specific functions, examples of which will be given later.

In Gio, Krā, and Konor countries, to the north and east of the Mano, it seems evident that there was no exact counterpart of the Mano *Gɔ ge*. The Mano *Gɔ ge* did not walk about or appear in public, whereas his nearest equivalents in these other tribes could walk, dance, and even "hear palavers" (hold court)

in public. The Mano were more inclined to have *Gɔ ge* settle things in secret session, while the Gio *ge* would accomplish the same result publicly in more dramatic fashion. He could, thus, fulfill functions which in Mano had to be carried on by some of the lesser *ge*'s, in addition to functions corresponding to those of *Gɔ ge* as described.

On the whole these masks were used as badges of office by public officials of various types. It is convenient to give here a few examples of masks from the northern tribes whose functions resemble *Gɔ ge*'s to some extent. First are notes obtained from five different sources concerning the functions of Gio masks actually called *Gɔ ge*. Others with different names follow to illustrate related functions.

Gɔ ge from the town of Tāwīe (French Gio country) used to walk about from town to

town. When he came into a town the people had to kill a cow for him. His special taboo was that no water must be allowed to touch him at any time. He made laws for the townspeople.

Gɔ ge from Tāwie (Butulu section, *Gio*) had a home in the bush and did not walk about, nor come to town. The *zo* people went into the bush to drink palm wine ceremonially with him. He made laws to govern the *zo*'s. He also superintended such important events as the election of a new chief, palavers between clans, etc.

Gɔ ge (*Gio*) was sent for when a big chief died. He came and danced there four days, demanding chickens and other gifts. He would ask the people such questions as, "How many feet have four cows?" and would fine those who could not answer correctly as much as a sheep or four chickens. He would demand palm wine daily and all his followers would drink it. He would appoint one man to divide the wine so each man would have a full cup. If the last cup was not properly filled, the man would be told that he had spoiled everything and must pay a fine of one cow. When he was ready to proceed to the business of electing a chief he addressed the people telling them, "Your big chief has died. You called me here. Who do you want to succeed him?" They showed him the proposed successor to the office. He would ask the candidate, and other of the big men, seemingly foolish questions and put them to various tests (as above).

If the candidate did not demonstrate that he "knew how to talk," *Gɔ ge* disapproved of him and another candidate had to be brought forward. When the new chief had been agreed upon to the satisfaction of *Gɔ ge* and the elders he again danced all day. About noon he would demand of the people that they kill a cow "with two heads." They would retire outside the town and kill two cows, bringing the two heads and one body to *Gɔ ge*, who had them cook the meat for the *zo*'s to eat. The *ge* continued to dance till dark and then left town that night. His special regulation was that no one must pass behind him. He never looked behind him. Only the big people could see him when he came to town. No one who spoke English—that is, had adopted any outside culture—would be allowed to see him.

Gɔ ge (*Gio*) sent a messenger before him, telling everyone, "*Gɔ* will come tomorrow. Shut up your sheep and goats and cows!" When he came he would catch and kill any cattle he found at large. When he came to town he used to make laws. He might say: "No one must fight here. The fine will be one cow. You all, do you hear?" Three times he would ask them and they would answer: "We hear."

Gɔ ge had a house in the bush, not very far from town. It was forbidden for any woman to go into that part of the bush. *Gɔ ge* sometimes came to town, demanded palm wine, and divided it among the *zo* people. The partakers of the wine received it kneeling, with the right hand extended, the right forearm supported by the left hand. When they were drinking they would not empty the small calabash, but would refill it three times. If anyone drained his cup *Gɔ* would ask him, "Why do you drink up all my wine?" and would force the man to sit beside him so he "could get sense." He would keep him there until his people paid the equivalent of one cow. Two white sheep would be accepted in place of the cow.

The one who dispensed the wine, likewise had to be careful not to pour out the last wine in the vessel until he had notified *Gɔ* that the wine was about to finish. Then *Gɔ* would graciously give him permission to empty the vessel. The dispenser had to kneel on his right knee while pouring out the wine for the company. This wine ritual was to teach the men a distinctive habit or conduct. It was used in certain areas only.

Gɔ ge had all the people in his power and care. He could make laws to govern them. They were obliged to kneel before him. No one was allowed to stand in his presence. He sat in the open door of his house, and the men gathered at a respectful distance in front of the house. No water could touch *Gɔ ge*.

An old white-haired man was the owner of this *Gɔ ge*, and kept the *Gɔ* house in the bush. When a leopard was killed, the hunters carried it to him. "Here is a thing that we killed—some kind of meat."

He would tell them, "Oh, that is a leopard!" After he had named it to them they could speak the name, "leopard." Then they would all dance and celebrate the kill. The old man

would kill a cow for the hunters. On the way home the hunters could appropriate anything they wanted to eat, because they "had saved their country from war," they said. This was always the privilege of returning warriors. All leopards belonged to the old man who was the guardian of the *Gɔ* house. After the Government people came to the *Gio* country the house used to be built in town. Government messengers could not go there. The people could eat the leopard meat.

Tɔ kpɔ gɛ in the *Gio* country imposed restrictions and taboos. He could close certain streams to fishing for one year. An over-farmed section could be declared fallow for three or four years. If a man who wanted to raise cattle appealed to him he could decree that no one could buy the man's cow. She was to stay in town and have calves — perhaps for seven years. At the chief's recommendation a law could be passed against pulling up immature cassava when "hungry-time" threatened.

Ni bli bu gɛ (pl. X, *e*), also in *Gio* country, could be called to a town by its inhabitants. He would stay three or four days and make recommendations on any problem brought to him. He was evidently highly respected, for he demanded a small baby to be brought, killed, and cooked for him. He "ate" it all himself, actually stuffing it into a bag hidden below his chin.

Flɔ gɛ (*Gio*) could stop war. No one dared shoot at him. He would walk up and ask, "Did you tell me you were going to fight"? The answer was "No." He thereupon fined each party one cow. When the cows were brought he called representatives from each side to arbitrate. When the matter was settled both cows were killed and everyone joined in the feast.

Gba gɛ (*Gio*) came when a man had got into a fight, and sat down in front of the man's house to talk the palaver. The loser paid one hamper of rice, one white chicken, and four hundred white cola nuts. When the matter was settled the *gɛ* danced in town in honor of the winner, who was supposed to reward the *gɛ* with a cloth or at least a chicken.

Bā gɛ (pl. X, *i*), a large mask with cow horns, sometimes danced all night. Women could not see him. He sat in judgment in palavers be-

tween other *gɛ*'s. When a blacksmith's sacred hammer, *yini*, was broken this *gɛ* was called to preside while it was repaired. All the blacksmiths of the section came together while the best of them put the pieces in the fire with suitable ceremonies, welded them into a solid chunk, and forged a new *yini*.

Lu gbo biɛ (*Gio*) (pl. VI, *a*) settled palavers between lesser *gɛ*'s, sometimes talked palavers in his own town. He did not travel. He put restrictions on the fishing season in some streams. Sometimes he heard lawsuits for debt. He could carry difficult cases to *Gɔ gɛ*. He sometimes danced and then the people killed a sheep or a goat for him. The mask was kept in a bag in the cult house.

Za gɛ (*Gio*) was called to town by the clan head. He danced a little, after which he was told that the men would go to the bush tomorrow or the next day to drink palm wine. Next morning each big man took some palm wine with him to a secret place in the bush where the real business of the day was to be discussed: measures to be taken to stop too much buying on credit, or too much irregular sexual activity, or a warning to someone against boisterous conduct. Sometimes this *gɛ* would take a group of boys with him "to teach them good sense." One chicken or five cola nuts was collected from each boy.

Di gɛ (*Gio*) (pl. X, *a*) interposed when crops were poor in one section and the people of an adjoining section were accused of "making witch" to spoil them. He would call everybody together to talk it over. Apparently it was impossible to arrive at any real conclusion in such cases, but everything possible was done to settle the palaver. Then the *gɛ* said, "If any man does not fear famine let him go home but if any man prays to me he will have good crops." The people then brought him small gifts, whereupon he poured water on the ground, made a little mud, and rubbed some on the forehead of each person, promising that it would soon rain and the crops would get better.

Kma gɛ (*Krā*) (pl. VI, *d*) presided when the big people had a palaver to talk. Chiefs sometimes called him to settle disputes between clans or to catch a thief. When he settled a dispute the person judged in the wrong brought a cow, killed it, rubbed the blood on

the mask, and carried the meat and guts to the place where the palaver had been talked, dividing the back, head, and one leg among the big *zo's* present. The rest was cooked and eaten by all those present. These palavers were held at night. No one might pass in front of this *ge*. When a thief was caught this *ge* would be called and the culprit brought to him. The man was forced to return whatever he had stolen and to pay the *ge* four cats and two gourds of palm wine. Such a palaver was held in town with all the women safely behind the doors of the huts. The *ge* took the cats home to catch rats. The palm wine was divided among the *zo's* present.

Gɔ ge (Krā) evidently presided at secret meetings of the elders to discuss important palavers before they were tried in open court. He was referred to as the spirit of the ancestors. The details of the procedure were not learned, except that a sheep or goat was sacrificed and eaten by the assembled elders. The heart and liver were given to the keeper of the mask.

Gbo ge (Gio) (pl. XII, *b*) could stop war. Whenever any Butulu section tired of war the warriors would send an old *zo* called *Gbo* with a white chicken to ask this *ge* to come and stop it, saying, "Here is our heart." He would go to the *zo* people of the town, Tāwīe, and ask them to stop the war. They would send *Dɔ nu ge* to go and warn the fighters that *Gbo ge* was coming.

The messenger, *Dɔ nu ge*, said: "Excuse me, but *Gbo ge* is coming. Don't fight any more."

When *Gbo ge* arrived, he said, "Who makes all this noise here?"

Then both parties would say, "We were quarrelling but no palaver."

He would say: "The country does not belong to you. You have spoiled the law. Come now and fix the law. Just let me show you that I am what I am."

Then he would hold up his left arm and termites would fly out from under his arm. He would lift up his right arm and bats would fly out and catch the flying termites. The very bush where this *ge* sat would become bare a few days after, as though it had been burnt.²⁵

He did not hear the palaver, but punished

²⁵ Undoubtedly with a little human help, secretly applied.

both sides equally for breach of peace. He fined the fighting bands four cows each. They brought the cows demanded. Then they each brought a slave, who was killed, and his blood rubbed on the face of the *ge*. All ate of the feast.

Dzyi ge (Konor) heard palavers between clans. If any man was found guilty of a serious offense he had to pay a cow. If he could not pay the same day he himself was likely to be killed, in which case his hair was woven into the beard of the *ge*.

Tche ge (Konor) settled town squabbles among women. He made them all sit down and called all the old women to settle the palaver. The fine was usually two or three sheep with enough rice, palm oil, and pepper to provide a feast for the entire town.

Ldoe ge (Konor) (pl. X, *b*) stopped fights in town. He commanded everybody to stop fighting and sit down. He had the power to shoot anyone who refused. After the furor subsided each side had to bring one cow. The cows were killed and eaten by all the people in all the towns of the section, as a pledge that the fight was over.

Nana ge (Pl. V, *c*) used to come to town in the daytime when there was a fight. No woman could see him. He adjusted the quarrel and whoever proved to be in the wrong had to pay two cows, one for the owner of the mask, one to be killed and eaten by the townspeople, who furnished rice to accompany the feast.

Some years ago this mask was worn by its owner to stop a war between the Gio and the Konor-Kpelle on the French side of the border. The *ge* was shot at by a Gio man and the right horn was broken and had to be repaired. In this case the Gio men were judged to be in the wrong. They paid eight cows and two slaves. The Kpelle contingent took the cows and divided them. Because the *ge* had been shot at they beheaded one slave. The victim was eaten by the Kpelle group and his blood rubbed on the mask. The Gio people had to beg pardon of the *ge*, with additional presents.

The second slave, who was a living sacrifice, married a woman who was thereafter called *Ge Na*, "the *ge's* wife." She was taboo to

other men, and ritually a perpetual virgin. A mask was made in her honor (pl. I, c). (The woman was alive and living in the *zo* section when the mask was made.) After this the two masks, *Nana ge* and *Ge Na* would come to town together. If a small boy looked at the mask *Ge Na*, the wearer complained of it to *Nana ge* and he made a big palaver about it,

accusing the boy of flirting with his wife. The culprit paid one cow, which was kept in town until a suitable time when he also had to pay over four hampers of rice. The town's *zo* people brought four hampers of cassava, which was made into *dumboi*.²⁶ The feast was eaten by all the people in town, both men and women.

POLICE

Masked officials were used as police by *Gɔ ge* in all parts of the country. A few typical examples follow:

Zuo wi nu (pl. V, f) was sent to collect a bad debt. If a man owed a cow and refused to pay, this *ge* would go to the town and threaten to break all the water pots unless the debt was paid before sunset. He would not sleep in town. If the man still refused to pay or had no cow the townspeople would pay rather than have all their pots broken. He took the cow back and demanded his fee, which was two dogs and one cloth shirt.²⁷

The threat was not always the same. *Yidi bo gie* threatened to call down the wrath of the ancestors if he was not paid.

Mo gbɔ ge (pl. XI, b) started to take off his costume if payment was not prompt, whereupon all the women had to run indoors and no one could do any work. The men hastened to pay the debt.

Gbe ge, the "hamper" spirit (pl. VII, e), came to town to sit in front of the man whose name had been called by the chief's wife, meaning that he was guilty of adultery. (The woman was never punished except in private by her husband.) This *ge* brought a hamper about four feet long and a foot wide. This hamper had to be filled with "money," meaning cloth, rice, brass jewelry, and other things commonly used for barter.

When the *ge* was satisfied he said, "Now come and put on my whitewash."

The culprit then had to splash a mixture of white clay and water on the *ge's* forehead and ears. But before he could do this he had to pay the *ge's* commission of one homespun cotton gown such as chiefs wore.

²⁶ Cassava root, boiled and pounded into dough. It is eaten with "soup" made of oil, meat, pepper, etc.

Ya wi ("can't talk") also went and sat in front of the house of a man who was being forced to pay against his will. He could not talk, but pointed to whatever he wanted. His messenger, a "speaker," collected the things until the *ge* was satisfied. He ate out of two big wooden spoons and handled his meat with a wooden fork.

Nya ge, "the rice-bird" (pl. X, c), collected debts on the threat that he would eat the debtor out of house and home unless paid. He was also very noisy and would let no one sleep.

Ma va (*ge va*), from Maabo (Gio) (pl. V, e), was concerned if a man complained to the chief that his woman had run away. The chief then sent this *ge* to her people with a demand that she should return. He would accept the woman plus two sheep and two loads of rice for her husband. The *ge* demanded his commission of eight loads of rice, one chicken, twenty white cola nuts. This was divided between the *zo's* in the bush.

If the people refused to give the woman up they had to refund the dowry and return all presents that had been given them, besides paying the fees designated above. Every day the *ge* had to wait he had to be fed a chicken cooked with rice. It was a big palaver for a Gio woman to desert her husband.

Zai ge (Gio) called people at break of day to cut farm for the chief. All who had finished cutting their own farms had to respond. He went with them. When the chief's farm was finished the fee of one dog and two hampers of rice was paid to the *ge*, who divided it with the boys who had helped. The *ge* took the heart and blood of the dog.

²⁷ See Schwab, 1947, fig. 88, b.

Ga si ge (Kpelle and Gio) (pl. XII, j) called all the boys to help him clear a farm that did not burn well. Anyone not working well was fined a load of snail shells all filled with rice. This rice was cooked along with small snails and then eaten by the boys who *were* working well.

Gbi kela, from Dibison (Konor) or *Gba ge*, "dog" (Mano), with three helpers, broke up the party, with force if necessary, if people

were dancing too much in the moonlight. He told them to go to sleep. His helpers beat people with sticks. He himself carried an axe.

Dro da yi mia, from Di ple (Gio) means "snail calls leaf his brother"; i.e., snail thinks it is hidden behind a leaf but it is easily caught. This *ge* had his system of spies and caught criminals who thought they were safe. He was a sort of detective-magistrate-police-man all in one.

MESSENGERS

Ge's as messengers were of two types. The more important ones were of high standing themselves, having the function of "speaker," or representative of still higher *ge*'s. As such they could act in his stead or carry out his wishes. Less important ones announced Poro sessions, escorted the boys to and from town in Gio country (where the Bush was not really Poro but a circumcision school), or merely went ahead of the big *ge* to announce his coming. The *mā* of the Poro could also be sent ahead in a covered basket as "messenger of *Wai*."

Die si, from Lepula (Gio) (pl. VII, c), was messenger to *Gɔ ge*. He was sent to stop ordinary fights. If he failed he threatened to call *Gɔ ge*. If *Gɔ ge* finally had to go, *Die si* accompanied him and acted as his speaker and interpreter.

When the people wanted to open a Poro session they called *Die si* and sent him to ask *Gɔ ge*'s permission. If he said "no" they could not open Poro.

Maa va (pl. V, a) was a similar messenger serving the "big cow," *Nana ge*. He carried word that it was not good to fight and could impose a fine of one sheep for breach of peace. If serious fighting broke out he would warn the antagonists to stop, saying, "My father is coming next year."

If *Nana* came he would say: "Didn't you hear what my messenger said? Why did you fight in spite of his word?"

Then they would have to pay heavily.

Maa va also sat in council if called as "speaker" for *Nana*. As magistrate or law-

giver his fee was one cow. Here we see the function of *Gɔ ge* (*Nana*) shared with his speaker.

Ka ge, from Gbowie (Gio) (pl. VII, f), was messenger for *Lola ge*. He was sent to stop fights in the market place or in town. If serious trouble broke out in a particular place, he called *Lola ge*.

The mask called *Gɔ glii* in *Notes on the Poro*²⁸ was more likely the messenger of *Gɔ ge*. He may very well have been called the same name, since *Gɔ ge* in Mano did not walk about, as *Gɔ ge* did in Gio country. When this mask is compared with the other messengers, e.g., *Maa va*, this classification seems certain.

Si bo no ge, from Ziali (Gio), came in dry time about once every three years and said to the chief of a big town, "Why don't you send your sons to the Poro?" He abused the chief, telling him he was only a small boy himself. When the Poro was opened he would come again and collect his fee of a cloth and a white chicken and one load of rice from each "quarter" of the town; i.e., each kinship group, usually four or five huts.

Bɔ zulu ge, from Duopli (Gio), drove women from the waterside so that neophytes from the circumcision Bush could come and be washed, morning and noon, until the circumcision wounds healed.

Zo ge preceded Gio boys to town when they came out of the Bush and called their fathers to come and meet them. His fee was one brass bracelet and one chicken cooked with rice.

Dɔ mu ge was messenger to *Gbo ge* (p. 20).

²⁸ Harley, 1941b, pl. IX, d.

Gɛ'S PRESIDING AT PUBLIC FUNCTIONS

Gɛ's presided at various public functions, and those associated with crises in the life of the individual, such as birth, puberty rites, marriage, calamity, and death. Appropriate gɛ's did exist for all of these with the exception of marriage, which was probably too simple a procedure to attract the attention of the ancestral spirits.

They appeared also at the erection of important buildings and bridges, on the election of a new chief, on town holidays and feasts, at celebrations of victory in battle, at rain rites in time of drought, and at public witch trials — where a person suspected of witchcraft was tried, judged guilty or innocent, and executed if guilty, all by the simple procedure of forcing him to drink an infusion of sasswood (*Erythrophloeum guineense*).

'Zi (pl. XIII, i) danced when an important new baby was presented in public. This happened when the child was four days old, if a boy; three days old, if a girl. The gɛ took a bowl of water, put the baby in it, washed it, and rubbed white clay on it.

He said to the baby: "Don't get sick. Stay well like I am."

The mother gave the gɛ rice, the father gave him a chicken.

Gba gɛ, from Ziali (Gio) (pl. XIII, d), danced when the mother presented a new child of a chief to the town.²⁹

Gbini gɛ (Mano) (pl. XIV, f), as referred to above,³⁰ danced in town on the day after an important trial with execution of the criminal. This was perhaps to remove the memory of blood guilt, or to emphasize the new regulations designed to prevent such a thing from happening again.

Gbā gɛ (pl. X, d) seems to have been the Gio equivalent of Gbini gɛ and was undoubtedly intended to represent the ancestral spirits.

Pia sɛ, from Belewali (Krā) (pl. VI, e), danced for any town or "quarter" of a town at planting time. He could be sent for on any important occasion. He demanded a sheep to be killed and eaten by all the people. He chewed cola nuts at planting time, spewed

them on the ground, rubbed up a paste, and rubbed it on the foreheads of all the important men, saying, "Good luck to you this year."

Lɔ gɛ was called the hungry one. Drought and famine were thought to be caused by the breaking of some Poro law, which was usually inferred from some accident in the Poro. In such an event the chief would send a messenger to the owner of the land, who would send Lɔ gɛ. He would demand a cow to be eaten by the elders of all the towns of the clan, assembled in the palaver house at night. Then the elders would beg the gɛ to give them food. He would explain how the Poro laws had been broken. Then they would beg him to "throw cold water for them," meaning that they realized they could never hope to propitiate their ancestors for such an offense, but would be pleased to beg for a little mercy.

He would then take water in his mouth, spew it on the ground while all assembled held their heads bowed down. He would say:

"At first my hand was on the ground so the crops would not grow. Now I take my hand off, since you have begged me." Then he would say, "So be it."

Tradition has it that it would thunder immediately and rain would fall the next day.

If the gɛ was not appeased sufficiently he spewed water on the ground and said crops would be better next year. It would thunder and rain just the same. This gɛ must have been a pretty good judge of the weather to time his ritual so nicely!

When a new blacksmith shop was to be built the area would be surrounded by a fence and the gɛ would stay in town all day. He went inside the fence and "talked" at intervals. Women were taboo in the shop.

When a suspension bridge was to be built or repaired,³¹ the gɛ sent a messenger to tell all the people that the road would be closed for one month. Then the gɛ was supposed to supervise the work. In the adjacent towns his voice would be heard at intervals as if it came from the river or somewhere in the distance.

²⁹ See *Gu lda gɛ*, p. 34.

³⁰ See p. 14.

³¹ See *Bla gɛ*, p. 26.

Gbala, from Zuamoni (Krā), supervised the building of the clay wall around a town, which was supplemented by palisades and gates and other barriers to keep out enemy raiders. His fee was one "white chicken" (a human being) and a hundred cola nuts.

Pei ge (Gio) could appear before dawn and say: "No one can go to farm today," thus declaring a town holiday. There would be a feast.

Gea — the lesser hornbill (Gio) (pl. XI, *e*) — would be invited by the chief to a palm wine festival. All the big people would gather. Palm wine had been prepared beforehand. Ten or fifteen calabashes would be set out. Only the men could drink. All sat down. If anyone drank standing, he would have to pay a fine of eight bowls of wine or eight empty bowls which he would pledge himself to fill "tomorrow." The culprit also furnished a little rice and palm oil. They would sit and drink all day. "In the evening we will talk." They would all joke about a man who was so thirsty he drank standing up. It got very funny about that time!

There is plenty of evidence that domestic animals were never killed primarily for food. They were killed primarily as sacrifices and eaten as such. If a chief wanted to make a feast he accordingly sent for the appropriate *ge* to preside. Each tribe had its own regulations as to how the butchering was done, but essentially it was a matter of cutting the animal's throat. The Mano *ge* always got his part.

Yɔ ge, from Beinwie, near Dananae, came to town when the chief wanted to kill a cow, and danced for all to see. His part was the lungs and heart. When he went away he thanked the chief and blessed all the people, predicting good crops and many babies.

Ti:n gbi (pl. XIII, *c*) was called to dance when a cow was killed in Krā country. He was given two bowls of rice with soup on it. Sometimes he went uninvited to a town to dance, accepting anything the people wanted to give him.

Zo ge, from Gbeli clan (Gio), was called when the elders killed a cow. A bowl of rice and two cola nuts were requisitioned from each house in town. The meat and rice was all

brought to the *ge*, who divided the food among all the people, keeping the cola for himself.

Me fei ge, from Gɔple (Gio) (pl. I, *b*), had the face of a woman. She was called to town when the chief wanted to kill a cow for the ancestral spirits. She demanded a human sacrifice. Someone was caught at random, and a vein cut so that blood dripped on the ground. A cow was then killed instead of the person. Suitable prayer was made to the ancestors. This was done to rid the town of pestilence or ill fortune of any kind.

It is interesting to note that this *ge* with the face of a woman performed a function that would have fallen to *Gɔ ge* in the Mano country. In one Mano town the name *Gɔ ge* was given to a mask with a woman's face.³²

Sie dɔ wana ge or "fire *ge*," from Diali (Krā) (pl. X, *g*), came to town uninvited when the chief wanted to kill a cow. He ran "like fire" all over the place. Then he came to the chief and said, "I am going now." The chief gave him a bowl of cooked rice, which he carried to the cult house and divided with his attendants.

Tɔ tɔ, from Gɔple (Gio), was sent for when the elders decided that a man deserved to die for some offense. They told him the man must die and they brought him a bowl of cold water. He poured a little on the ground three times, then threw the rest on the ground, saying, "*Tiɛ dɛ*" ("Let the fire go out"). That was all he did. He stayed in town from sunrise to sunset. No one could walk in front of him. The culprit died in two days.

In accordance with information obtained in another connection, it is conjectured that poison was slipped into the man's food at some time during the interval. Such ritual poisoning was done secretly, but was within the rights and duties of high officials. It was usually administered by a woman, following instructions of the high officials.

Gli dɔ ge, or sasswood *ge*,³³ from Ziali (Gio) (pl. V, *d*), presided over the poison ordeal,³⁴ which was the public trial and execution of a person accused of witchcraft. If the culprit was found guilty, succumbing to the poison, the *ge* carried him off into the bush, where the

³² Harley, 1941b, pl. IV, *c*.

³³ Schwab, 1947, fig. 88, *g*.

³⁴ Further details of this ordeal are given in Harley, 1941a, p. 153.

old men hacked him to pieces, cooked and ate him, even if he were not quite dead.

If the victim were a woman this *ge* did not sit in town, but in the bush where she would not see him. If she was found guilty her people carried her off. She was never seen again.

Gami do zia ge, from Ziali (Gio), came into town whenever a big man died, and danced and sang, "We are carrying ——— away." Then he led the procession to the grave. Returning to the surviving family he said, "I have carried your bad thing away." They gave him cola nuts, held out in both hands.

Burial in this part of the country was usually made the fourth day after death, but when this *ge* came the body was given him right away.

Tɔ bu ge, the "chicken," from Tāwie (Gio) (pl. XIV, *i*), was sent for whenever a big *zo*'s death was announced. People were warned that no chicken could make a sound while he was there, because chickens were his children. They took all the chickens to the farms. The

fine for a chicken that "talked" was a sheep or a goat.

The townspeople did not say the *zo* was dead, but "He has gone somewhere, we do not know where." There was no mourning for the dead man, people were merely very quiet and subdued. The feast for the dead would come a year later. They gave the *ge* a cow (or a slave), which he took home. All the *zo* people went with him to his home in the bush, where they killed and ate the cow (or slave) in secret.

In the Mano country the *ge* which was only a voice would "talk" in town when a big man died, but his death would be known only to the *Ki La mi*. No one else would know what it was all about. When the feast was made for the spirit of the dead a year later, there would be much celebration and *Gbini ge* would dance. This seemed to be done with the idea of sending the spirit to the realm of the ancestors, well pleased that his people remembered him. The size of the feast reflected the importance of the man so honored.

WAR LEADERS

In the *Notes on the Poro* ³⁵ a Konor *ge* was spoken of as "god of war" (pl. VII, *b*). Perhaps *Blɔ ge* (pl. X, *f*) also deserves this title. He would not dance, but followed warriors into battle. They presented to him any captives or slain enemies. The slain were cooked and eaten on the spot if victory had been complete. Any parts left were carried back to the home town. There a cow was sacrificed to *Blɔ ge* in honor of the victory. It was eaten by all the fighting men. *Blɔ ge* was supposed to be immune against gunshot.

This feast was presided over by *Do ze ge*, who probably functioned also as recruiting officer before the battle.

T'to ge, from near Dananae (Gio), was named after a famous warrior named T'to. In olden times a human sacrifice would be made to this *ge* the day before going to war. He would come to town, demanding a sacrifice. A slave would be killed by the head warrior. If he did not have a slave handy, he would take the child of a woman who had previously

been captured and had married into the clan. This was cooked and eaten after dark. The *ge* got the heart and lungs. He did not go into battle. The warriors would raid and burn an enemy town that same night.

Zi bo bie ("road-making elephant") (pl. XI, *c*), when the clan went to war, would clear the way via an unexpected route so as to surprise the enemy town. He would take off his mask, hang it on his back, and with a long cutlass clear the way with his own hand. When he broke through near the town he stopped and signaled to the warriors to go ahead. All this happened at night.

Nyine le lai gā ("he looks up at the sun") was a Mano *ge* who, during a raid, would sit in town all day looking at the sun. When the warriors returned they escorted him to the "men's house" in the edge of the bush. This house was used by the young men only, who constituted the current age group of fighting men. From this house they paraded at night in a procession called *Ge yumbo*.³⁶

³⁵ See Harley, 1941b, p. 26.

³⁶ See below, p. 27.

Sie da ge, from Beinwie (Gio), followed successful raiders into a town and set fire to it after they had plundered it. His share of the plunder was all the sheep and goats. Sometimes these animals were killed and eaten on return to the home town. Sometimes they were divided among the warriors, who could eat or keep them, as they chose.

A Mano informant said his uncle had a mask with a long nose like an elephant's. Wearing this mask he recruited fighters for a raid but did not go with them. Once, when the band returned successful, but having shed no blood or captured any persons, he was in a quandary; for his mask had a law which demanded blood sacrifice. His uncle was required by the law of the mask to furnish a human sacrifice, and he had only his favorite nephew. The nephew was brought, a cut made with a knife in his forehead, and some of his blood rubbed on the mask. Then a cow was killed

as a substitute to be eaten. Otherwise the sacrifice would have been incomplete.

Di kela from Belewali (Konor) (pl. XIV, c), danced for victorious warriors. This mask was kept in the same house as the image of *Wuliye*, made in honor of a woman whose three sons were all great warriors. Her image was the object of sacrifice and prayer for victory before warriors went to battle.

Bla ge, "sheep ge" (Gio), was described as a god of war. He also officiated at the building of suspension bridges, and escorted the boys to and from the circumcision Bush. Evidently this clan did not believe in the necessity for a multitude of *ge*'s, and doubled up his functions.

Pā ke la (Konor) (pl. XII, a) was said to lead a victorious group in celebrating and settling a conquered territory, building houses, and planting rice. His cheerful face is certainly fitting for such an office.

INSTRUCTORS

Ka ge, from Bople (Gio) (pl. XII, c and d), "the crab," was often prayed to for good luck in general, though he had other functions as well, showing the variability of function often seen in the Gio masks. For one chicken he would make medicine to aid a man to collect a debt.

Several masks with the distinctive features seen in plate XII, c and d, were collected from different localities. Most of them were called *Ka ge*.³⁷ In each case the functions described were beneficent, and would make one suspect that this *ge* was a sort of household god. In *Notes on the Poro*, page 22, he is the catcher of crawfish, to feed the boys in the Poro Bush. On page 23 he is the object of a monthly sacrifice in the household.

Du ge, with the face usually called *Ka ge*, was described as a clown, but with his clowning he taught respect to elders.

*Diā*³⁸ (half Mano, half Gio) also had the face of *Ka ge*. He was a "good *ge*." He said to the boys in the Poro Bush: "You must not make witch. You come here for a long stay. Behave yourselves so you can get well quickly

and go back to your people." He also went out at night to collect food for the boys. He acted as a sort of godfather to them.

Ka da ke se, from Kāple (Gio) (pl. VII, a), was so highly revered he would be considered under the section devoted to *Gō ge* were it not that he had the face of *Ka ge*. When he went to town a messenger went ahead, telling the people to clear the road. When he came to town he talked about local customs, history, and tradition, and gave the people good advice. They gave him a cow to take with him and they showed him a kitchen loft full of rice, telling him to come and get as much as he wanted. In the old days they gave him a slave. No one could pass in front of him. No imported (foreign) article could be brought into the house where he retired to rest. He took the loft full of rice and divided it among all the people in town, whether residents or not. They cooked and ate what they wanted the same day. The cow he gave to the zo people to do as they pleased with it. They promptly killed it and gave the blood and liver to the *ge*.

³⁷ Harley, 1941b, pl. V, f and pl. VIII, f.

³⁸ Harley, 1941b, p. 20 and pl. VIII, e.

*Za gε*³⁹ took a group of boys to hear a palaver talked by the big men, from which they would otherwise have been excluded.

A *gε* from Belewali (Konor) (pl. XI, f) danced before the old men and the big people. They killed a cow for him, then sat and listened while he advised them against certain things and told them how to conduct their affairs for the good of the people. Women were not allowed to see him.

Bla gε, "the runner," from Ganagli (Gio), came to town and led the boys in races. He could outrun them all. Sometimes he flogged the slow ones from behind. They ended the occasion by running up to a certain house, where the *gε* said: "Your boys have been running. Bring them something to eat." Then the chief brought a dog and a cat, with one hamper of cassava or some rice. They killed the animals and gave all the meat to the women to cook. When done they carried it to their own eating place in the bush. This was not done during Poro session. This was done to keep the boys in trim in anticipation of their becoming warriors who might have to run for their lives.

Gε yumbo (Mano) was not a mask but a kind of young men's cult.⁴⁰ The voice of this *gε* was heard near town at night. When all the women were inside the houses a procession entered town led by three young men in costume, but wearing no masks. The costumes were made of raffia, first a skirt, then a shawl or mantle, then a headpiece like voluminous hair. Each man held a pestle perpendicular in both hands, beating a rapid thumping rhythm on the ground as they glided along, winding between the houses. Each young man of that age group was supposed to fall in, carrying his weapons of war. If he came without them, he was severely fined. This was frankly a kind of military training.

P5 gε came to town at night after the women had all been sent inside. He begged palm wine, then told a story ending with a question which started discussion of some old custom or point in the history of the people. They sat around a fire in the moonlight.

Dū gε, "the coughing one" (Gio) (pl. IX, e), was a mask who came coughing and wheezing, walking feebly around in town in the daytime. Anyone ridiculing him or walking across in front of him would later have to pay a fine. The offender would not be reprimanded on the spot; but after the *gε* had disappeared he would be told by various people that he had insulted a spirit and would have to make sacrifice to the mask.

The chief, who had been present all the time, called for the mask; the wearer, who was in this case a woman, meanwhile having mingled with the other people. A messenger brought the mask and laid it on a white cloth with a cushion of soft leaves. The culprit paid a fine to the chief and was required to bring a sheep for sacrifice. The sheep was killed and some blood rubbed first on the mask then on the culprit's forehead. Then he was told to beg pardon. He would say: "Oh, my ancestors, I will not do so again. I did not know your law." Then rice was cooked with the meat and a little given to the mask first. Then all the people ate together. This procedure was designed for the purpose of teaching respect to the elders, to the mask, and to the ancestors.

This procedure was unusual in that the mask was worn by a woman, and in that the mask, as such, was exposed to public view. This would never have been done in Mano country, where not only the identity of the wearer, but the very fact that there was a *person* inside the concealing costume, were closely guarded secrets.

PORO Gε'S

Masks and masked figures were used in the Poro Bush school, called by the Mano, *Gε B5*, or "spirit Bush," to discipline and educate the boys and inculcate them with a deep respect for the ancestral spirits. The *gε*'s acting as

Poro officials also exerted a similar influence upon the women and children, with the difference that they were kept forever "outside" and ignorant.

The session of *Gε B5* alternated with those

³⁹ See p. 19.

⁴⁰ See Schwab, 1947, p. 272.

of the girls' Bush school. Neither school could be held if the clan were at war. They were preferably held when there was a surplus of food. Whenever *Gonola* and *Wai* decided the time was suitable, *Ge Na* would come to town at night and say that it had been a long time since he had seen anything to eat. Or in Gio country *Si bo no ge* would appear in public and ask the chief why he didn't send his boys to the Bush.

The chief would go through the formality of sending to *Gonola* asking that the Bush be opened. *Ge Na* then came to town at night and said he would catch all the boys. *Zi kū ge* walked on the road when all was ready, saying, "The *ge* will catch men today."

The people in the meantime made sacrifices of food at the crossroads to the ancestral spirits, asking that all would go well in the Bush. The boys at play in the town would arm themselves with wooden weapons and pretend they were going to kill the *ge*, making great show of boldness to conceal their fear.

While the boys were thus preparing themselves the men were making ready the section of forest where the Bush school would be held. They closed all roads except one, and erected an outer and an inner portal through which all must pass. A house was built for *Gonola* and his consort, *Wai*. The boys would have to sleep in the open until they built their own houses.

Tēa bli si (pl. VIII, *e*) stopped all traffic on roads leading to the Bush and flogged people caught on the forbidden paths after due warning had been given. He might also catch stray men and carry them into the Bush to be initiated.

Long before light on the morning of the day set *Dē bu ge* (pl. VIII, *f*) went ahead into the Bush carrying the sacred razor and a fetish to ward off harm. Following him came the other officials, some of them *ge*'s with their masks and costumes and other properties for the rituals.

All day long a procession of people streamed out of town toward the entrance portal. The

boys who were to enter were escorted by family groups all pretending to be happy and gay as they danced along the way. Some of the mothers, in rags and tatters, danced a ritual dance. There was an atmosphere of people setting out on a pilgrimage, as group by group they marched to the edge of the Bush within sight of the outer portal. In the Gio country one of the *ge*'s, *Bō Ku ge*, might join in the procession, escorting the neophytes from the town to the Bush entrance.

Inside this, each boy had to fight and "overcome" three masked *ge*'s. Then they went through the inner portal where *T' to bli ge* (pl. VIII, *a*) made them swear on the big *Mā*⁴¹ that they would never tell any woman about the things they were about to see inside the Bush. He then spewed water on the ground, made a paste, and rubbed it on the boys' foreheads.

Yō pu ge in Gio country went to town on the first day of the Bush and asked for a bucket of whitewash (clay). It was set down in front of him. Each woman in town then saluted him. Before she spoke she was told to dip some of it and smear it around her eyes. This was symbolic of contact with the spirits and constituted a pledge of good faith and a prayer that all would go well.

Gele wi ge (pl. VIII, *b*) went to town with the blacksmith's big sledge hammer to break off, from the anvil stone or some other convenient rock, three chunks of stone for the hearth. With suitable ritual these were set in the ground with the small end up, so as to support a big pot over the fire. When the stones were ready a human sacrifice was made to the fire, before kindling it with a brand from the eternal fire of the cult house.

Si kū ge, "smoke catcher" (pl. VIII, *c*), had ready a supply of firewood that would not smoke.

Gō ge commanded that a slave boy be brought for the sacrifice.

Bō ke tutu fed the victim herbs which made him dumb and blind and insensible to pain.

When he was unconscious *Bō ze ge* (pl. VIII,

⁴¹ "The mother of all masks," the mask pictured in the frontispiece is said to be one artist's interpretation of their *ancestral spirit*, earth mother goddess. It is an old mask of uncertain history. Plate II, *a* is a recently carved interpretation by a Bassa artist. Plate II, *b* is

a similar carving by a Krā artist. It was customary to have such masks carved by a "foreign" artist. Plate I, *c*, by a Konor artist, is in the same category of ultimate idealization of the female face.

g) cut out his liver with a sacred razor and *B5 kpo si* prepared other parts for magical purposes.

Then *Si kũ gɛ* kindled a fire that did not smoke.

B5 bulu kpa gɛ finally cooked the meat as a sacrifice for all to eat.

The boys were again sworn on pain of death never to reveal what they had just seen, or run away, or contact any woman while in the Poro.

In the southern part of Mano country *Gɛa gɛ* had the townspeople catch a kingfisher alive, to be added to the human sacrifice.

During the days and months that followed the boys learned many things. *Bele kpɔ gɛ* told them that white was the color of the spirit world and smeared them all over with white clay.

Gɛ Na came at night and said, "I see something to eat today I have not seen in a long time." He came again when the boys were to be circumcised. This was sometimes done in Mano country in a preliminary session not considered very important. This circumcision ritual was called *K'le B5* and constituted the entire ritual in the far Gio country. The Mano, like tribes to the west, had developed the true Poro, or *Gɛ B5*, in which the boys were marked with scars supposed to be the marks of the *gɛ* that swallowed them and gave them rebirth.

Gbini gɛ (pl. XIV, f) presided over this scarification ritual, which took place toward the end of the session, long after the boys had been circumcised.⁴²

Tɔ kũ gɛ rounded up some chickens for this occasion and one of them was set aside for a "scapegoat" for the blood to go into, so the boys would have no serious hemorrhages.

Yumbo si gɛ caught any blood that dripped from the wounds in a basin, so that none would drip on the ground. This blood was eaten in the food of the big men, not by the boys.

If one of the boys was unduly scared, or a crybaby, *Zai bo lu* made a bit of horseplay, giving him some of his own blood on a kind of leaf to swallow. This made a lot of gas on his stomach and they then made fun of him, saying that *Zai bo lu* had made him pregnant. When he had had enough they gave him something to make him vomit.

⁴² For other functions of *Gbini gɛ*, see pp. 14 and 23.

Gɔ gɛ appeared four times during the session, wearing his mask, and saying, "*Dunuma*." At this word everyone present, including the big men, fell prone and stayed down until he touched each one on the back with a bundle of twigs held in his left hand. Anyone he wished to punish was left there.

Wai, unmasked as cult mother, supervised the cooking and heard the petty complaints of the boys. She had a real job, for it is certain some of the little fellows got homesick. She also had a spy and a fact-finder, because she had the responsibility to be sure than no boy ran away or contacted his mother, and tattling was taboo. This responsibility was terribly heavy, for running away was punished by death. *Wai* could also impose the death penalty on older members with *Gɔ gɛ's* approval. It was her hand that tapped the victim on the forehead with a tiny ceremonial axe as the signal to the executioner. If a victim escaped she "put his name in her *mā*." Then the entire Poro organization with all its intertribal ramifications was pledged to bring him back. There was little chance of escape.

The older men were coming and going all the time, and instructing the boys. These details, however, are outside the scope of this study of the *gɛ's* themselves.

There were three *gɛ's* who made medicine for the boys. This medicine was either herbal or magic.

There were in Mano at least seven different *gɛ's* who acted as foragers to round up food. In the Gio country their number increased to seventeen, in the Geh country twenty-two, each with his own special way of getting food. They would beg, steal, borrow, and extort from the outsiders in every conceivable way. There were catchers of frogs, snails, grasshoppers, snakes, chickens, ducks, or any small chop. They normally make the people help. Some tricked the people into paying fines, of sheep or goats, cats or dogs. Others were frankly beggars. No one could refuse them anything they asked. With so many boys out of circulation, and men often taking advantage of the opportunity to get an extra meal in the Poro, it was a serious drain on the resources of the

community, and these foragers were a very necessary part of the Poro personnel.

Here are a few examples of the *ge*'s who acted as foragers in Gio country. More than forty others are described in *Notes on the Poro*.

M5 ge, "the rat," from Meaple (Gio), went to town at night and stole whatever food he could lay hands on. Anyone who objected had to pay a chicken or one hundred cola nuts. He had a man with him to carry the plunder back to the Bush.

Slu ge (Gio) ran up when women were beating out rice, grabbed some, put it in his basket, and ran off, saying, "*Sie kpāna* (They force me to do this)."

Nε ge, "the bat," from Blontua (Gio), collected rice from the boys' mothers at night. The women could not come out of the houses, so he sent a messenger inside each house while he danced outside.

Blε b5 ge, from Kāpa (Gio), danced during Poro, exacting a cloth from each house of a big man in lieu of "cold water" (preliminary sacrifice or payment), so that their sons might do well in their ordeals.

Near the end of the session *Gɔ ge* took the boys to the waterside, washed them, and gave them their new names. *Gbini ge* danced with no costume to show them the secret of the masked *ge*. *Ge Na* paraded openly before them, so they could see that this *ge* was only a voice and a means of making this voice.

In the circumcision Bush of the far Gio country, where the boys did not sleep in the Bush, they were escorted to town every night and back to the Bush every morning by a masked *ge* called *Bea dɔ su pue*, who cared for them in various ways, making medicine to keep trouble away from them and to help them get well quickly. After carrying the boys to the Bush in the morning he would return to town when the women were cooking, and begging a little from each one carry it back to the boys. He would come again at night when women were cooking the evening meal. No one dared refuse him. That is why they called him *Bea dɔ*, which means "beggar." They said, "He can't sleep," because he was constantly on duty for a month at a time. Perhaps more than one person could wear this mask in relays.

When he escorted the boys to the Bush he left them in charge of *Ya b5a*, who took them

to the waterside to wash their wounds. If a bird flew past he would say, "What is that?"

"A bird."

"Catch it for me."

The boys would beg off with cola nuts.

Shortly after the end of the session in Gio, *Dra ya b5a* (pl. XII, i) went to town and called the names of all the boys in the Bush. When the people told him, one by one, that the boys were in the Bush, the *ge* pretended to cry, saying, "All my boys are gone!" Then he became serious and said: "Some of them will stay with me in the Bush; they will not come back." He named the ones who had died and told the people they would never see them again.

When graduation time approached *Bo ge* went to town and told the people to clean the roads and sweep the town. He watched at night and fined anyone caught soiling the ground, saying: "Don't waste it here, go farther away. Don't dirty the ground just because you had plenty to eat."

Bɔ kũ ge came to town and took all the women's rings for the boys to wear on graduation day. *Nyũ kũ nɔ ngɔ* took all their beads and hung them around the necks of the boys. *Tu kũ ge* gathered all the horns to be blown in the procession back to town.

Zo la kε ge, from Luāple (Gio), came to town the night before graduation to collect his fees from all the mothers. He demanded fine "brass things" — anklets, bracelets, or other ornaments — from each, telling them he had made magical medicine so that all the boys had been kept from getting sick. He had actually given each one of them a little iron hook wrapped with cotton string to hang over his shoulder. When the boys came home they returned the little iron hooks and each gave him a "dash" of a ring.

Flɔ ge (Mano) (pl. XI, g) had a similar function. He seemed to be a kind of guardian of the boys while in the Bush and made both magical and herbal remedies for them. When the Bush was not in session he sometimes acted as judge to try offences against the Poro laws.

Kpo G5 (Kpao, French Guinea) (pl. XI, d) was called to hear evidence and pass judgment when people broke the country law, or Poro law. He levied fines varying from three cloths to one cow.

T5 la ge (Mano, near Gio border) (pl. XI, i) came to town in the daytime when anyone

broke a sacred law of the Poro. Small boys could not look at him. Women could see him, but only at a distance as they went about their work. Anyone found guilty of telling an outsider, especially a woman, any of the secrets of the Poro would be sentenced to death. Anyone exposing sacred objects to public view would meet the same judgment. There was no possible ransom. This *ge*, accompanied by all the old men, would carry the offender into the bush, torture him to death, cook and eat him, with rice, salt, and spice.

He exercised a function here similar to that of *Gɔ ge* in the true Mano area.

In one way or another things were managed so that all the boys had new clothes. They gave the old ones to *Kumu ge*, "the owl,"⁴³ who promised to keep them for them in case they wanted them later.

The *Gio* boys consequently returned to town with horns blowing and were met with singing and dancing. They were given anything they wanted for one day.

On the last day of the Bush school session *Wai* cooked several pots of stew so that each boy could enjoy his favorite meat and observe his family taboos. When the final feast was finished and all were ready *Ge Na* brought them into town.⁴⁴

Yongolo to, from Luãple (*Gio*) (pl. II, *j*), was a mask that was not worn. It was one version of the big *Mã* of the Poro. At the end of the session it was carried in a basket called *Yumbo tie* by the last boy to leave. With it in the basket were other properties, including the pottery whistles. All the *ge's* danced while this mask lay in state in front of the cult house. When their dance was finished the basket was carried inside the cult house and put away. It was said of this mask that if a woman ever saw it she would never menstruate again.

B5 la ge, from Luãple (*Gio*), came to town at the end of the Poro and said, "My man has eaten all the boys." This would tend to clear up the symbolism of *Gɔ ge* and *Wai*. To outsiders the musical voices of the *ge* who cannot be seen are attributed to the wife of the *ge*. Initiates also refer to the flute, the pottery whistles, and resonating pot (pl. III, *j-p*) as the voice of *ge's* woman. These "female" properties are kept along with the big *Mã* of the Poro

by *Wai*. The *Gɔ ge* mask is kept by *Gonola*, along with the powerful magical fetish, *dun-uma*, whose name is the password of power in the Poro ritual. *Gonola* also kept the cult *lai* on which the ceremonial razor and hooks were sharpened. The *zo* who kept the razor and hooks was of secondary importance and should be considered as the operating surgeon, in spite of the fact that his work and his tools were the greatest secret of the Poro Bush school.

The ancestral spirits are, therefore, represented by male and female symbolism. *Gɔ ge*, with his deep voice like the growl of a leopard, is the symbol of the male ancestors. The big *Mã* and the voice of the *ge* that cannot be seen are the symbols of female ancestors.

The remark of *B5 la ge* that her husband has eaten all the boys, together with the tradition that the boys stay in his belly while in the Poro, to be reborn at the end of the session, can be explained only by considering that belly as sexless, or as the realm of the spirits without reference to sex.

It would follow that, since the boys could be reborn only from a female belly, they were therefore reborn by the female ancestral spirit. This idea is clearly substantiated by the fact that when the boys are actually presented to the town as newborn babies it is the voice of the *ge* that cannot be seen that brings them to town. I myself have seen this ceremony.

It was just at sunset with a pale pink light reflected everywhere. The town was absolutely quiet. I had been warned not to go to town, but I wanted to see what was happening. I met the group of men with their pottery whistles unexpectedly around a corner. In consternation they hurried into the compound of *Gonola*, dispersing, so that I could see clearly that no masked figure was among them. There was literally nothing to see.

The chief came toward me, saying, "You have scared the *ge* away."

I said, "Let us go to the old man's quarter, I want to shake hands with my friends."

On approaching the gate I was met by the big *zo* who kept the razor and hooks, the operating surgeon. He objected to my going in, admitting that I knew all the secrets, but pointing out that few of the people knew that I knew, and would not understand unless I swore

⁴³ See p. 39.

⁴⁴ See p. 28.

to secrecy and let them "wash my face" — with water in which the big *Mā* had first been washed.

I objected to this, thinking quickly that if I swore to secrecy I could never write this paper, which I had in mind even then. Then they agreed to proceed as though nothing had happened except that the *ge* had "retired." He had done his work anyhow.

The town crier then announced that the *ge* had "born" the boys again and the women could come out of their houses. There followed fully two minutes of absolute silence, which was exceedingly impressive, for the sunset light reflected from the clouds changed to an eery gray like early dawn. I am of the opinion that the men had been waiting for that lighting effect.

The town crier walked toward an open space in town where the boys were sitting on a long row of mats, each covered head and foot with a country cloth blanket, so arranged that he could peep out where the edges of the blanket were held around his face like a hood. Gradually little sounds came from the houses as one by one the women peeped out. Then they came slowly and the boys began to look out from under their blankets.

The chief of that quarter of town was introduced to me as mentor of the boys. He began to introduce them by their new names. They were treated as strangers even by their mothers. They said nothing.

Then began a strange pantomime of friends helping the boys to stand and teaching them to walk. Each was revealed covered with white clay. His friends showed him how to wrap his blanket around himself in lieu of clothing. Then they began showing him things, naming them, and teaching him to talk, carrying out the idea that he was like a newborn baby.

The town belonged to the boys for two days, while nobody did anything except teach them — even how to eat. They were introduced to everybody, and a sort of open-house reception held in the house of the chief who was acting as their mentor. Needless to say, the boys learned very fast! At the end of two days they were men in full tribal standing, but for weeks afterward they were extended every courtesy usually reserved for visiting dignitaries.

The function of *ge*'s in the Poro Bush school, or *Ge B5*, must be considered from three ap-

proaches: first, that of the big men who regulated everything; second, that of the boys themselves; third, that of the women and children who, as a class, were outsiders.

To the big men the *ge*'s were purely and simply masks. These masks were not only revered and worshiped, but at the same time used for very practical ends. They were used to control and instruct both the outsiders and the neophytes. In the old days when the *Ge B5* was in session up to three years, instruction and discipline of the neophytes constituted a large proportion of the activities of the *ge*'s toward the school. The other functions of the *ge*'s in the school were essentially the same as their functions toward the community in general, including the making of medicine, both herbal and magical, protection against witchcraft or calamity, the administration of justice, and the conduct of rituals with or without sacrifice.

To the neophytes in the *Ge B5* the *ge*'s were all things. They were first of all to be feared as though they were living gods. Even as the boys came to know more and more about them, this fear was merely commuted into an attitude of worship. Concurrently, the fear of the masked figure with costume concealing the man was commuted to worship of the mask as such, at which stage the man or wearer simply joined in the worship.

This summary does not quite apply to the neophyte's attitude toward the small *mā* or the big *Mā* of the Poro. This attitude was always one of worship, but in the case of the small *mā* it was on a very familiar and personal basis. He could put it in his own pocket and carry it around with him. When he talked to it, it was more or less like talking to himself. He could even abuse it, provided he begged its pardon afterward.

The big *Mā* was less personal, since it represented the spirits of his ancestors, which he would never dare abuse or insult in any way. Above all other masks it was the one he revered most. On it he swore eternal secrecy with an oath that pledged his very life and set him against his own mother and all other women.

His attitude toward the *ge*'s, however, was not always that of fear and trembling, because some of them were very busy, month in and month out, raiding the outsiders — begging, stealing, buying, or borrowing food and other good things for the boys themselves and for the

men, with whom they gradually came to enjoy more and more comradeship.

To the outsiders the *ge's*, of the *Ge B5*, were a fearsome lot. They could not be denied or opposed. They had to be given whatever they demanded. They were immune from all laws and regulations except the ones which they themselves imposed. They existed for one purpose only, and that was to keep the *Ge B5* functioning and protected. Since their own sons were inside, the women not only put up with it but even met the *ge's* half way working "day and night" to provide extra food. The life and tempo of the whole community was for the time being thus regulated by the *ge's* to the needs of the Bush school. Even war had to wait, and the final calamity of death sometimes had to be ignored. (The death of one of the

initiates during a Poro session was not even announced until the close of the session, and then no mourning for him was allowed. They said, "He was a witch.")

When the girls were in the Sande Bush school, *Di Da B5*, the women retaliated in principle, but neither in kind nor in amount, towards the men. There were no *ge's* to carry food. The women did that simply and quietly. Instruction of the girls was carried on in the same way by the women, without the use of masks. It was only at the time of the graduation of the girls that the *ge* exercised any function. At this time a mask⁴⁵ was worn by the head woman of the Sande; but she did little more than escort the girls back to town and dance, at a distance from the men, more or less surrounded by other women.

EXTORTIONERS

When the *Ki La mi zo's* or other big men wanted to get together to talk things over they usually did so secretly in the seclusion of the bush. Between Poro sessions they used one of the *ge's* to round up something to eat. Here again we see the hand of *Gonola* at work, for the *ge's* could function only at his bidding.

Gbea ge, "crocodile," from *Yiaple* (Gio) (pl. XI, a), would sit down and talk where a party of men were fishing with nets. Each fisher must give him one fish. When he came to town he begged from each house for something to eat with his fish. Each woman cooked rice and one fish and put this in his basket. The *ge* took the food to the bush to be eaten by the assembled *zo's*.

N'ga dolo, "I can't agree with you," would demand and receive cloth and when that was given him he would ask for a loin cloth. Various items of clothing would be offered him, but he would refuse them until a black cat had been found for him. If a cat was not available he would accept a black cloth as a substitute.

Sa ge, from *Kāple* (Gio), carried a small whip with which he would beat any small children he found in town. After he had flogged the children he would ask for chicken eggs. The mothers probably brought the eggs gladly to buy off the *ge* from further flogging of their children. He carried the eggs into the bush to be eaten by the *zo's*.

⁴⁵ Harley, 1941b, pl. XII, b.

Tie bli si, from Butulu (Krā), was a bad *ge*. His nose was on upside down. On market day he used to sit on the road demanding tribute from everyone who passed. If a contribution was not forthcoming from someone, he would strip off whatever clothes the person was wearing and appropriate them.

Ya bu ge, "rice eater," would come when a chief made a feast and beg some of it and carry it away into the cult house where the *zo's* would eat it.

Gba ti de, from *Kāple* (Gio), danced in town and had to be given food. Whatever was given he would always complain that it was far too small. Rice would be brought in baskets, fanners, buckets, and so on, until he had gathered all he could extort. Then he would take it to the chief and beg him to cook it for him. He would also beg meat to go with it. Then he would take it all into the bush and divide it with his "gang." It was not known what organization was behind this *ge* or who ate the food.

Ya w5 do, from *Kāple* (Gio), walked about or sat down when he came to town but said nothing. Children laughed at him but he didn't mind. He nodded his head at passers-by. People gave him small presents but he paid no attention to them. After three days of this the chief gave him a generous dash and sent him away.

MEDICINE AND MAGIC

The practice of medicine among the people was a function of housewives, old women, midwives, and men who specialized either as herb doctors and bonesetters or as diviners who mixed their magical prescriptions with certain herbs.⁴⁶

When an unknown pestilence came and the matter did not yield to the herb doctors and diviners the chief might seek higher aid by calling *Zo ge* (pl. V, *b*). All the women would be sent inside the houses by the *ge*'s messenger. Then he would come to town and harangue the men, telling them to stop bewitching one another. If anyone sick at the time got well he was obligated to make a feast for the whole town. The *ge* was called for this feast. He carried his part of the food away into the bush.

Longwa, from Seaple (Gio) (pl. XIII, *f*), came to town when there was an unusual amount of sickness. It was said that if he came on a sunny day the clouds would come and hide the sun. Any sick man watching him dance was supposed to be cured promptly.

The wearer of this mask was keeper of all the masks for that clan. He was therefore on a par with *Gbini ge* in Mano.

Dā ya bāa, from Butulu (Gio) (pl. VIII, *i*), was guardian of the boys in the circumcision Bush and made medicine for their ills.⁴⁷

Gu lda ge, from Zoli (Gio), was called to attend women in difficult labor. He spewed water on the ground and made a paste of mud. The midwife took some of the paste and rubbed it on the patient's forehead. What good this did is questionable, and limited, naturally, to the psychological effect. It is a fact that these women frequently stay in labor two or even three days and still have live babies. At any rate the *ge* would take the credit and visit the baby on the fourth day if a boy, the third, if a girl. On this occasion he presented the child to the town, naming it, and blessing it by spewing water on it from his mouth, and promising it good health.

Out of my collection of over five hundred masks there were five which had been made in memory of men with faces distorted by disease (pl. IX, *a, b, c, d*). Each of these was venerated as a petty god, and sacrifices made to it by indi-

viduals suffering from the same disease, with prayers for recovery.

One of these masks represents gangosa, or destruction of the nose by yaws. Two others show one-sided facial paralysis. The fourth is a likeness of a man with a tumor of the lower jaw. The keeper of this last one posed as a doctor and tried to help sufferers by building a little fire on the tumor. It is interesting to note that this sort of medicine is rarely practised and that masks of deformed faces made little headway as gods of medicine. I was told of one other such mask. It was made in memory of a blind man.

Gbasa, from Du kling (Mano), was used in the initiation rites of the *Gbasa* society for suppression of witches. The head of this society also held it by the chin while dancing in town at night. He was accompanied by all members dancing backwards on their heels. They kept it up all night long, coming and going at intervals. When there was any heavy work to be done "*Gbasa* would do it." This meant that all the young able-bodied men would do it just before dawn, working *en masse* and walking backwards on their heels. They could perform miracles of strength by working up a mass hysteria which trampled a wide path over ordinary obstacles.

Ga sua, also called *Gōti*, *Tokali*, *Beleke wea*, or *Ge* (Krā) (pl. XV, *a*), is not a mask but a solid sculptured clay head with grotesque human features. Often it has four eyes like *Lu bo bie* (pl. VI, *b*). It is an object of sacrifice and prayer for protection against witches or for luck, new babies, fertility of the fields, or recovery from illness. Its keeper, like *Gonola*, is owner of the town. It is not, however, a clan symbol and not every town or clan had one.

Its owner is really more of a diviner than clan head. As priest of this great fetish he dances with it balanced on his head. Working himself into a frenzy he answers questions about past, present, and future. As an oracle the fetish is also featured in the catching and execution of supposed witches.

Sometimes a set is made (pl. XV, *b*), the big one having two smaller "helpers." When this is the case the priest with the big one on

⁴⁶ Harley, 1941a, pp. 37-43.

⁴⁷ See Harley, 1941b, pp. 16 and 21.

his head mutters and makes indistinguishable sounds. One of the others talks to the petitioner. The third one is an intermediate interpreter.

The fetish is greatly feared, and no rascal will willingly enter a town where one is located.

From Butulu in near-by Gio country comes

MASKS WITH ANIMAL FEATURES

The grotesque exaggeration of features of the "male" masks often include likenesses of animals and birds. Some are deliberately hideous and so much more animal than human that they deserve the name *demon*. It must be admitted that frightfulness is part of the technique of keeping women and children in awe of the spirits, but the awe of the wearer himself is just as real. No man could fail to respect a mask to which he had sacrificed his own son, as did the "priest" of *Gɔ ge* on succession to his office.⁴⁸ There must, therefore, be more than frightfulness to explain the grotesque animal masks.

The explanation lies in the native veneration of force or power inherent in anything whether animate or inanimate. The *mana* of the forest animals is very powerful. The tendency to worship animals for this reason has been combined with the conviction that ancestral spirits are the most powerful of all forces. The consideration of animals as totems and helpers represents a stage of that combination, and gradually the spirits of animals became linked with those of ancestors. The combination of human and animal features in these masks is visible expression of the attempt to recognize spirit power as having both human and animal attributes. Animals on earth were able to do some things that human beings on earth could not do. The all-powerful spirits are thought of as able to effect both types of activity.

By combining human and animal features with frightful exaggeration an impression was created which tended to match the further idea that there were certain unexplained phenomena

the story of a wooden Janus figure with similar functions (pl. II, *c*). It is never seen in public. Its priest stays with it inside the house while one of the interpreters stands in the door and another talks to the people outside. It is a sort of court of high appeal for cases that cannot be settled in the ordinary way. It also issues decrees and announces taboos and "laws."

and calamities pointing to a force more potent than either human beings or animals. By combining the symbols of the most powerful things they knew they sought to create symbols of the all-powerful unseen force of their universe. To that symbol no sacrifice was too sacred, no price too much to pay for its *mana*.

Gɔ ge (pl. VII, *d*) in some parts of Gio country is identified with the leopard. In Gbande country the great mask was a crocodile, *dandai*.⁴⁹ In Gio the elephant, or a conglomerate forest demon, *Lu bo biε* (pl. VI, *b*), seemed to hold a very high place. His high cheekbones and his four eyes tend to connect him with the gorilla masks of the Cameroon. The Gio have an important mask called *Klua ge*, which is the chimpanzee (pl. IX, *j*). One Gio mask of high standing was called the "python." In the Konor country toward the pastoral savanna the big mask is distinctly a cow, but it has the chimpanzee cheekbones and the same protuberant eyes as all the other *Gɔ ge*'s. Finally, there is the peculiar four-eyed clay demon head, *Ga sua*, which as we have seen,⁵⁰ serves several of the functions of *Gɔ ge* in the Grebo country.

Many of the lesser animals were represented by masks. Sometimes they had human faces only slightly modified to suggest animal characteristics. Sometimes the animal features were predominant, especially the mouths.

The hornbills and the crested hawk illustrate this very well. When anyone killed a great hornbill the "owner" of the hornbills put on his mask (see below) and demanded why the

⁴⁸ If a *lai* (celt-adz) whetstone (pl. III, *b*) accompanied the *Gɔ ge* mask, another human sacrifice consecrated the transfer of this sacred tool to a new home. The same ceremony was necessary when *Gonola* or *Wai* obtained a horn of magical substance called *Dumuma* which gave power over all other *ge*'s.

When a new costume was made for any of the *ge*'s, human sacrifice was again demanded. See Harley, 1941a, p. 131.

⁴⁹ Harley, 1941b, p. 27 and fig. 2, p. 28.

⁵⁰ See p. 34.

bird had not been brought to him. He was usually satisfied if he was given some of the meat, but, if he wished, he could impose the fine of a goat.

Kpala (pl. XI, *e*), the lesser hornbill, sometimes went to judge petty palavers. When they saw him coming they settled the matter hurriedly because they knew he would judge harshly.⁵¹ *Za*, the crested hawk,⁵² would put on his mask and lead the whole town to the house of the man who had killed a hawk without reporting it, singing, "*Za, wing bi Za*," and collect five hampers of seed rice to be divided among the women who had sons in the Poro. They planted the rice.

The beliefs of the people left plenty of room for the animals in their traditions. As pointed out above, the owners of the forest were also owners of the forest animals. Sometimes the ownership was connected with specific clan totem animals but there is much confusion on this point and nothing very clear can be said — except that it was taboo to kill or eat a totem

animal, and that if one were killed for meat or as a dangerous beast it had to be brought to the clan "owner." Sometimes such an owner had his own personal animal familiar. It was finally believed that such an owner could not only influence the totem animal to do his bidding, but could actually change himself into his animal familiar and walk about alone or lead the animal herd in person.

An old bull elephant separated from the herd and on the rampage was certainly a person, and the people thought they knew who it was. They said, "Bumbli is vexed about something." The idea of were-animals and of animal helpers was widespread. Anybody's dream soul was believed capable of entering an animal and getting into all sorts of mischief. If an animal pressed by hunters took refuge in a village it was certainly a person and suitable ritual was necessary to readjust matters if the animal was killed, e.g., its tail had to be cut off to keep it from "disappearing." Sometimes it was allowed to go unscathed.⁵³

PETTY GODS

Most important of the petty gods were those supposed to bring fertility to childless women. The first two here described had the same face and may have been carved by the same artist, though they came from different parts of the Gio country.

Zei, from Luāple (pl. XIII, *e*), was called to town by a group of men, some of whose wives had failed to conceive. He told the men in public that it was God's will that they had no children, but that he would give them his blessings and then their women would all have babies.

He took some water in his mouth, spewed it on the ground, made paste, and rubbed it on the abdomen of each childless woman. "That is a fine baby I leave in your belly." Then he danced and the women cooked rice for him. The husbands furnished a goat and all the town feasted. The *ge* took his part to carry with him. He put his hand in the bowls of rice and said: "That is a fine baby I put into the rice. Let it go into your belly."

Women sometimes came from other towns to get the blessing. The blessed rice was shared

by the husbands who had called the *ge*. Then the *ge* danced again and went away.

The *Zei* mask from Bople, a variation of the one above, was worn by a man who came to town when requested. He took dried powdered leaves of *Kāi* (*Maesobotyra sparsiflora*), a tree which bears much fruit on limbs and trunk, and put them in a pan with water. Childless women washed with the water and prayed to the *ge* for babies. All the women in town brought rice, which the *ge* took into the bush and shared with the *zo* people. His fee was one cloth.

Three other masks with the same face have already been described. One⁵⁴ came to town to present a new baby to the public. The two others⁵⁵ were called when a cow was to be killed as a sacrifice to the ancestors at planting time. In time this face would probably have come to be widely worshiped as a goddess of fertility.

Along with one lot of masks there was brought to me an unusual sacred piece of pottery — really two bowls joined together (pl.

⁵¹ See also *Gēa*, p. 24.

⁵² Harley, 1941b, p. 22, pl. VII, *e*.

⁵⁴ See p. 23.

⁵⁵ See p. 24.

XV, c). The story told me by the man who brought it was that it had been made about fifty years before by a woman named Madia, who lived in the town of Loli, Zo clan, Gio.

Madia was herself a twin, and was the mother of three pairs of twins. This remarkable family seems to have given rise to a sort of "cult of twins" in that clan.

One of Madia's daughters gave birth to four pairs of twins. Her husband, whose name was Gbli mia, "pot cover," had a mask made for himself as a patron of twins, and called the mask *Kpe ge*. Whenever his wife gave birth to twins the man put on his mask and danced in town. *Kpe ge* was a "good" *ge*. When he danced all the people brought him small presents and congratulated him.

When the twins were old enough to walk, Gbli mia killed a chicken as a sacrifice to the mask, and each twin was given a leg of the chicken to eat. This would "make their legs strong." In that locality twins were considered good luck, an opinion which is very unusual in the country as a whole.

The twin pots were made for the twins to eat from. In this example, the pot at one end was larger than the other. This variation was explained by the fact that this set of pots was made for a pair of mixed twins, and the larger pot was for the boy twin, the smaller for the girl.

At the time the twin pots were brought to me, I was told that the grandmother, Madia, was still living, and that the grandchildren were already adults. The owner of the mask, Gbli mia had died. I believe his mask was brought to me and is somewhere in the collection, but I cannot now identify it.

Vb ya ge, from Duople (Gio), chewed certain leaves and spewed them on the door sill of a childless woman, first rubbed some of the paste on his forehead, then on the woman's forehead as she sat just inside the door. He promised that she would have a baby. If she did he visited her again and named the baby *Pea se*, "good face." Then he demanded a sacrifice of a sheep or a goat. A cloth was acceptable as a substitute.

Z'na ge, from Maabo (Gio), was a mask that was not worn. The *zo* who was its keeper was

called by childless women. He took the mask to their town, washed it in water, then told the women to wash themselves with the same water. Their husbands watched the procedure. Five or ten women might wash in the same water. Each one of them then brought some rice. One of them brought a chicken and presented it to the mask, saying: "We have no children. We have called *Z'na ge*. He will make us get children." Then they presented the rice to the mask. The *zo* then killed the chicken and rubbed some blood on the mask. The women cooked the chicken with rice. The *zo* offered a bit to the mask and called all the people of the town to eat. Everyone, including the *zo*, ate some.

Another mask from the Gio country was described in *Notes on the Poro*.⁵⁶ It was prayed to by the midwife and the pregnant women for fine babies and easy delivery. Here again the mask was washed and the women washed with the same water. They made a thank offering to this mask after the baby was born. This mask had a woman's face with two breasts carved on the forehead.⁵⁷

Zena, meaning "God" (Gio) (pl. XIII, a), blessed people and predicted good fortune. This mask had the face of a woman but it was worn by a man. He promised babies. Women cut off bits of their hair and worked it into the headdress of the mask. He went to the water-side, got a pan of water, and took it to the center of town without looking back. Childless women then dipped their hands in it, rubbed it on their bodies, and prayed: "Let me have a baby." A baby born to one of them was named *Zena*. Then they brought rice, which was cooked by a *zo* woman. Everyone in town had to eat some of it. No one was allowed to leave town on the day *Zena* was expected.

Gba ge, "dog spirit," from Tāwie (Gio), was kept by the owner of the land and was probably similar to *Go ge* in Mano country. He decreed, "No one may take a cutlass to cut farm until you bring my rice." The people brought him ten hampers of rice and a goat, which was sacrificed so that no one would cut himself or anyone else during the farm cutting. The *ge* told them no one would get hurt. Then they brought a white chicken and a hamper of white

⁵⁶ Harley, 1941b, p. 29.

⁵⁷ Harley, 1941b, pl. XI, d.

cola nuts to thank him in advance for protecting them.

When they had finished cutting all their farms the women brought five hampers of rice, one goat, and one white chicken. The *ge* sacrificed the animals for good crops, then told the women to go plant their rice, promising them good crops.⁵⁸

Sie da ge, from Bɔple (Gio), also functioned at farm-cutting time. When a man was ready to burn his farm he went to this *ge* and told him. The *ge* gave him a leaf to chew, with oil, and spew out on the spot where he planned to start the fire. Then the *ge* said, "Take the fire away from my heart." The man had to promise to make a pot of palm kernel oil for the *ge* after he burned his farm.

Klue ge, from Luāple (Gio) (pl. X, b), was supposed to come to town and sing before anyone could harvest and eat new rice. The people had to bring him some first. Then they all ate a little and after that everyone could eat of the new crop.⁵⁹

Blē ge also demanded new rice in return for having helped drive away the rice birds which were a pest everywhere.

Gbea, "wild goose," from Ziali (Gio), was a patron of fishermen and made medicine for them to put in the water. He went with them to the catch. Some men worked under water with elongated dip nets held under one arm. Others drove fish toward the nets, diving and splashing about. They gave the *ge* one fish out of every ten. The medicine stupified the fish so they were easily caught.

Gbu, from Beinwie, near Dananae, was not worn but carried and put on some leaves near the river where men went to catch fish. Any fish caught was shown to the mask. All were cleaned on the spot and the "belly" parts put in a pot for the keeper of the mask. When the men returned to town the women cooked the fish, furnishing some rice "for the mask." The keeper and his son ate this rice cooked with the fish livers and cleanings.

S5ge, from Bɔple (Gio), was the hunters' patron. Its keeper washed the mask with water containing certain leaves, then washed the hunter's dog with the water. The dog was thereby protected from snakebite or other bad luck.

If the hunter made a kill he gave the heart to the keeper of the mask.

Sometimes the hunters would also pray to this mask, spewing water out of their mouths onto it and asking for good luck.

Yi lo ge, "running water" (Gio), made "medicine water" for various people — for hunters, trappers, and fishermen — to give them good luck. When a chief was about to go on a journey this *ge* gave him medicine water to rub on his body, saying, "If any man makes witch for me let his own witch kill him." When a man was ready to cut farm the *ge* would make medicine water, take it and sprinkle it on the spot where farm was to be cut so the crop would be good. This medicine water was called *Gbo gbea*. Fees to be paid were the blood and heart of any animal killed by the hunter, a hamper of new rice from the farmer, a sheep or a goat from the chief who went on a journey. All these fees were divided among the *zo's* of the town and eaten in the bush.

A Gio man once brought a mask which had belonged to his grandfather, who was chief of the hunters in his clan. The man did not know its name. The hunters used to bring it out when they went after a Bongo antelope. They put it on some leaves and danced around it. Then its keeper "threw cola" to find out whether or not they were likely to see a Bongo. If the cola fell right, each hunter would then chew one of the cola nuts and spew it onto the mask. Then they went out to hunt.

The Bongo is a very wary animal and hard to kill. A successful hunter must tell all the assembled hunters afterwards every detail of the kill, exactly how he stalked it. This was done as they gathered around the carcass. If he left out any detail they would never kill another one, because the spirit of the animal must be convinced that it had been outwitted.

The carcass belonged to the chief. No common man could claim such meat. The chief divided it according to definite rules.

Di wi was the gate-keeper of the diviners' Bush (see below). The entrance fee was one chicken.

Dē ge, from Diali (Gio) (pl. VI, f), the diviners' patron, tested the wits of the boys in the Poro school. When the diviners met in a

⁵⁸ See B2, Harley, 1941b, p. 25.

⁵⁹ See Harley, 1941b, p. 26.

certain place in the Poro Bush, the "drum" beaten was a human skull. The masked and costumed figure sat over one end of a concealed tunnel or hollow log through which ran a long string. A neophyte would bring this *ge* a white chicken, which he put under his foot while he tied the string to its legs. Then the chicken disappeared, drawn into the tunnel by a man concealed at the other end of the string. This man killed the chicken and threw it over the bushes to fall at the feet of the *ge*. The conundrum was put to the neophyte: "Who killed my chicken?" The boy had to discover the answer for himself or pay six bracelets.

PORTRAIT MASKS

As stated at the beginning of this discussion, masks were often portraits. Here are a few of the portraits with definite histories to illustrate how portrait masks became petty gods as "recent ancestors." At least, the people represented were still remembered as human beings and had not yet become merely masks (pl. XII).

To be slightly inconsistent, I want to refer first to the mask, *Gɔ ge*, supposed to be the founder of the Poro. It has been conventionalized until its fearsome characteristics outshine its human features, but the tradition is that the mummy still exists in Loma country to the northwest of the Mano people. The ritual of initiation of a wearer of the mask in that country includes the laying of the mummy's hands on the head of the new "priest."⁶⁰

The great warrior whose mask became a sort of god of war has already been mentioned, as well as the mother of three great fighters who was similarly venerated.⁶¹

Ma die (pl. XII, *e*) was remembered by the Gəh people. "She was a woman of so generous a reputation that she was immortalized by a mask. The wearer danced at the time of farm cutting while the women cooked for the men cutting the farm. The wearer sang of the fame of *Ma die*, who cooked a pot of rice that never got empty. This was to please the spirit of *Ma die* so all would have plenty to eat and the farm would be fruitful."⁶²

This *ge* also danced in town when the diviner had reason to rejoice over the good fortune supposed to have resulted from following his advice. When he was through dancing, the diviner gave him a brass anklet.

Kumu ge, "the owl," from Bəwi (Krā), was a bad *ge*, the patron of witches. When his voice was heard at night, the members of the witch cult assembled to "play" and dance. Members were said to specialize in charms for catching or harming enemies or in actual poisoning. This was the only really bad *ge* in the whole collection. This cult was unknown in the Mano country.

Nya wɔ was a very popular young woman. When she was about to die, she begged that a mask should be made for her so her friends would not forget her. This was done before she died. She saw it and was satisfied (pl. XIII, *b*).

*Gɔ gbi ge*⁶³ was a mask made in honor of a man famous for the amount of cola nuts he consumed. His mask became a collector of cola nuts for the Poro boys.

*Sie ge*⁶⁴ (pl. VIII, *j*) was the name of a mask made in honor of a man who was both greedy and generous. He collected huge supplies for the Poro. When he died the people made this mask. They prayed to it when they went to plant rice, asking for fertility and plenty.

*Me ma ge*⁶⁵ was a mask made in honor of a boy artist, famous for his skill in carving masks. He was teacher of the art, and since this mask carved by one of his pupils is of very fine quality, it is unfortunate that his art cannot be carried on today.

Other portraits include the fine masks of mutilated faces which became petty gods of medicine.

Ge Na was the name given to the mask (pl. I, *c*) made in honor of a young woman who became the wife of a slave brought as a living sacrifice to *Nana ge*. Here we have a beautiful mask which was the "wife" of a very powerful *ge*. Both these masks are on display in the Peabody Museum.

⁶⁰ Harley, 1941b, p. 27.

⁶¹ See p. 3.

⁶² Harley, 1941b, pp. 22-23.

⁶³ Harley, 1941b, p. 21.

⁶⁴ Harley, 1941b, p. 23, pl. VII, *a*.

⁶⁵ Harley, 1941b, p. 26, pl. IX, *b*.

The little *mā's* have already been described as partly portraits of their owners. There were also small replicas of big masks, made when a big one became worm-eaten or was destroyed by fire. It was always a miniature of the big one, and was in a way a portrait of it; for it was made so that the dispossessed spirit of the big one would have a resting place where it would feel at home.

Ma bɔa, "what thing do I lack?" was immortalized by her portrait carved on the front of the handle of a ceremonial spoon made about 1860 in Glai in the Krā country. On the back of the handle is the portrait of *Nying gli*, "dry your tears," the favorite girl first to be called by *Ma bɔa* when she needed help to prepare a feast for all the people. This Janus spoon⁶⁶ was carved at the request of *Ma bɔa's* husband by a young man named *Mea wɔ*. As a carver of masks his cult name was *Zena* (God).

The spoon was used at public feasts. The head woman would announce the feast: "My name is *Ma bɔa*. *Nying gli* is here to help me. No one will go hungry today."

Another ceremonial spoon, *Wε ya*,⁶⁷ 28 inches long, was made about 1830 in memory of *Wε ya*. It was first used by *Mε yi kɔ* who died about 1850. She used to say: "My name is *Wε ya*. Anyone who has no food will come out of his house and eat with me today. When we have a feast it is not good for anyone to go hungry." She gave a brass ring to the chief and salt to all the poor people, then cooked the rice.

When the feast was prepared she took first some of the food in the spoon and offered it to the spirits, then passed the spoon around to all the people, who pretended to take and eat with the ancestral spirits, but actually they took none. After that, all could eat. One old man and one old woman spoke for the crowd, thanking *Wε ya*. The chief gave *Mε yi kɔ* a cloth, which she "gave to the spoon."

These portraits on spoon handles were not quite masks but were very similar in function. They were ancestral soul-pieces used in public ritual.

DANCERS, MINSTRELS, AND CLOWNS

People speak of fine *ge's* who dance and sing on public occasions. Other *ge's* who dance include good *ge's* who share their gifts with all the people and bad *ge's* who are never satisfied and beat people. Most of these dancers have female faces, but the bad ones have faces of demons or animals.

Occasionally, two of them appear together, one acting as speaker or interpreter for the other. There has been little development, however, of *ge's* as dramatic actors. The costumes are too cumbersome, and it was strictly taboo for the actors to reveal themselves as human beings.

Zɔ ge, "the stutterer," and his speaker appeared together, both masked (pl. IX, g and b). The stutterer tried and tried to say what he wanted, then finally the speaker said it for him and he came out with, "Yes, that is what I was trying to say." They made it so funny that they got more than they asked for.

At harvest time another pair played in town. One represented a sleeping rice-bird, the other

a spirit driving the flies away from the sleeping rice-bird, he himself falling asleep frequently.

Bea ge visited a new grandfather, asking his woman to give him the crusts of scorched rice left in the pots from the feast celebrating the arrival of a new baby. The woman ridiculed him and even cursed with impunity. He took it good naturedly, laughed, and joined in the fun.

Kupa ya ge was the portrait of a flirtatious young woman, worn by a man who went about complaining in a woman's voice: "My fashion is bad. My husband beats me. I can't stay in any place long. Palm wine makes me vexed. Rice makes me mad." People drove him from place to place, laughing.

Di va had a big mouth, which was his name. He was a noted teller of tall tales and made much out of nothing. Sometimes he came to town when people were quarreling. His exaggerations of the case were so ludicrous that the quarrel was forgotten. If there were any weapons involved, he took them with him.

⁶⁶ A similar spoon is figured in *Notes on the Poro*, pl. XIII, a, and Schwab, 1947, fig. 71, b and c.

⁶⁷ Schwab, fig. 70, c and d.

Mini sɔ ɛ sang for women beating rice to the rhythm of his singing, and in this way so lightened the work, keeping them amused with his song.

Zā ɛ, from Butulu (Gio), sang for women to dance. This mask had the face of a man and was worn by a man. He sang in front of each house in turn and expected a small gift from each householder.

Gbing ɛ, from Maabo (Gbeali, Gio), went from town to town, and sang inside the houses, accompanied by various musical instruments. The door was shut and presents were collected for him by an assistant outside the door.

Zo ɛ, from Bɔple (Gio), danced in town, thanked the old men for their wisdom, and urged them to take good care of the young women. Then he thanked all husbands for taking such good care of their wives. He expected three chickens and one bucket of rice. The food was cooked and eaten by all husbands. Some of the chicken's blood was rubbed on the mask. The *ɛ* was given a fee of one hundred cola nuts.

Nɔ a nya, from Butulu (Krā), a fine dancer, asked for a dash from each person; but if a man had nothing to give, the *ɛ* would give him something. Finally he danced before the chief, asking for something to eat. This he divided among all those present. He was called a "good *ɛ*."

Zi mia gā, "traveler can't see," from Bauldi (Gio), was so-called because a traveler would become so intrigued by this *ɛ*'s dancing and singing that he would forget about his journey, no longer be a traveler, but stay to see and talk about what he had seen.

There are several masks who all danced and played at festive occasions⁶⁸ (pl. XIV, *b*).

Gbolb ɛ, from Kāple (Gio), danced and played with boys not yet initiated. He re-

ceived a dash of fresh palm kernels. The son of a big man would sometimes kill a chicken or a sheep for all the boys to eat. Blood was put on the mask.⁶⁹

A boy would sometimes dress himself all over with plantain leaves and dance to amuse his elders.⁷⁰

Dɔ mia, "chief" (Mano), was a clown who carried a piece of rope and pretended to beat people who could not sing well. Everybody laughed at his antics. He tried to show them how to sing, but he couldn't sing at all well himself. Anyone who did not give him a dash had to sing to the tempo of the *ɛ*'s whip, pay money, or take a flogging. There was a lot of horseplay. This *ɛ* was for the young men.

Klua ɛ, "the chimpanzee" (pl. IX, *j*), from Boelu (Krā), came to town dancing boisterously. He carried a whip or stick with two iron prongs, threw things around, and beat people. His rough clowning amused some people very much. He might even take up a mortar and throw it through the door of a house. If he hurt anyone, or even drew blood with his iron hooks no one complained. He was easily vexed and went off in a rage, even chasing people into their houses. People barred the door if there was a baby inside. Finally the chief bribed him to go away. He was something to talk about for days afterwards.

This *ɛ* also taught manners in the Poro school by always doing the wrong thing.

The "long *ɛ*"⁷¹ was not masked but had his face covered with a black net so he could see well while no one could see his face. Like masked *ɛ*'s, he was completely covered by his costume. He danced on stilts so long that he sat on the roof of a house to rest. He was called by the chief purely as an entertainer to honor a distinguished guest or amuse people on a holiday. He was surprisingly agile and acrobatic.

SUMMARY

The *ɛ*'s had many faces and almost as many functions, but there were certain fundamental qualities shared by all. They were inanimate masks manipulated by human beings, who were in turn manipulated by the spirits supposed to

dwell within the inanimate masks. Some were portraits of recent or distant dead, others were characterizations. The characterizations were partly human, partly animal — deliberately representing the combined *mana* or essential

⁶⁸ See also Harley, 1941b, p. 22 and pl. V, *g*.

⁶⁹ Schwab, 1947, p. 364.

⁷⁰ Schwab, 1947, fig. 86, *a-d*.

⁷¹ Schwab, 1947, fig. 86, *e*; also, Harley, 1941b, pl. XIV, *c* and *d*.

power of both. The essential power was thought of as emanating from the ancestral spirits, both human and animal; for tradition included animal ancestors, animals as brothers, and men who could actually change themselves into animals of the forest at will.

In use the *ge's* exercised all the functions necessary for control of society on the religious, the executive, and the judicial levels, reinforcing their authority by oracular responses. The human manipulation of these inanimate objects was so regulated by custom that abuse of power was kept at a minimum. The "owner" or high priest-judge could send *ge's* as his messengers, police, magistrates, extortioners, or entertainers; but he himself was subject to the will of the people through the council of elders.

If the wearer of a mask died, his place was taken by another and the mask continued to function without interruption. Thus the equilibrium of the community suffered a minimum disturbance, being that occasioned by the loss of an individual not especially important as such, rather than the loss of an important official whose individual character could not be replaced, whose successor might be activated by policies divergent from those already established. The mask thus provided continuity of authority, regardless of the personal attributes of the current wearer.

Even the individual loss was minimized by keeping the man's death secret for some time, probably until all necessary adjustments had been effected. The tendency was for the community to carry on as though nothing had happened.

The fixed functions of the *ge's* extended, with some local variation, across the borders of the clan or tribe, and even across language barriers. They even exerted control over warfare. This was carried to such an extent that arbitration through the great *ge's* was more final than the results of war. This regulation of war, reaching beyond the limits of clan or tribe, marked the beginning of intertribal unity.

Since *Gɔ*, the Creator, was chief of the town of the dead, the great ancestral masks became linked with the name, *Gɔ*, and called *Gɔ ge*, "God spirit." As an oracle it was supreme judge, but it needed a good deal of human help. The mask and its keeper were, however, in-

separably united in spirit by mutual responsibility to the people on the one hand and to the ancestors on the other, both by custom and by tradition of the Poro and Sande. The sense of their responsibility, in the minds of the people, was kept alive by the unknown mysteries of sickness and calamity, by the sense of unknown danger lurking in the forest. This sense of danger was accentuated deliberately by the masked *ge's* (who were supposed to live in the forest), by the seclusion in the forest of boys and girls in Poro and Sande, and by trial and execution of criminals in the secret place of the forest.

Such a mask passed from father to son, or to nephew, with a human sacrifice to let the ancestors know that a new priest was in office.

The differences in function of the masks in the various tribes was partly due to the variation in the development of the Poro. The Gio people did not have the Poro as such, only a circumcision Bush. The Geh people were basically Gio, but had partly accepted the true Poro from the adjacent Mano people. The Krā were really Half-Grebo with an entirely different system of initiation rites. The Konor were half Mandingo, half Kpelle, and had a modified form of the Poro. All, however, had *ge's*, and these masks were everywhere used to enforce law and order, to intimidate women and children, and to furnish the central figure at any important event or crisis.

The *ge's* were seldom, if ever, bad spirits. An occasional clown or prankster appeared and upset things in general; but sickness, calamity, and witchcraft were universally blamed on people — preferably living people. Sometimes poor crops and other such general calamities were blamed on the ancestral spirits and propitiation was directed towards them. There was no evil demon whose character it was to bring calamity unless appeased. Therefore, none of these masks should be called "devils." Yet that is exactly what they are called by English-speaking Liberians. To distinguish them from Satan they are called "country devils." This is another example of the old gods being replaced and becoming "devils," which originally meant "little gods." To the natives, "heathens" were the ones who could not see the *ge* — the uninitiated.

CONCLUSION

The mask as a portrait of an individual still living was demonstrated in the case of *Nya wɔ̃*, who requested that a mask be made in her memory, and saw it before she died. The symbolic *Gɛ Na* from Konor country, while not a portrait, was made to immortalize an incident in which the subject of the mask was still living, as the wife of a living sacrifice or consecrated slave, whose fellow had been eaten as a true sacrifice of propitiation. The small *mā's* were essentially portraits of their owners.

A death mask was regularly made of a great man before he was buried. Some of these became petty gods. The *Gɔ gɛ's* and other masks of similar rank were conventionalized representations of the first grandmaster of the society, though they sometimes represented him as half totem animal or forest demigod. Thus it has been shown that masks of the living as well as those representing the recently dead became objects of worship along with those of traditional heroes.

Masks in the likeness of animals and birds always had features partly human. These undoubtedly came to represent the dual power of the owner of the land and forest animals, and of the animals themselves, totem or otherwise. Masks, whether they were human or half animal, could therefore represent ancestral spirits, and all the evidence collected points to the belief that they possessed this essential soul-substance.

There was also the feeling that a mask was an entity in its own right, and in this sense it was a true fetish according to the present definition.⁷²

It was, in practice, a human fetish with a character of its own. The wearer could not act out of character and although he could use his own mind while wearing the mask he was *en rapport* with the spirit of the mask and subconsciously was inspired by his concept of what the mask represented. If he should act out of character, he was liable to swift and final punishment at the hands of the *Ki Gbuo La mi*, who took all these things very seriously.

In the final analysis the ruling force was custom, and as Marett has put it: "Our custom, our whole custom, and nothing but our custom."⁷³

Yet there was room for gradual change of this custom. New masks were added to the hierarchy, and so interpretation of custom by a living person was added to the whole, provided that interpretation received sufficient popular approval to perpetuate the individual as a hero or heroine. The function of a mask might also be modified by the interpretation or even the forgetfulness of the owner-priest, or conceivably by the assembly of the elders; but on the whole a mask had a remarkably well determined character, which was often intertribal in distribution.

While public opinion, acting through the elders, did not hesitate to deal the death penalty to anyone who blatantly overstepped the bounds of custom there was, nevertheless, considerable leeway in everyday matters, which enabled the "owner" or *gonola* to be almost a law unto himself.

There was a certain amount of rivalry between these clan leaders,⁷⁴ and petty warfare was almost constant so long as it did not interfere with local Poro and Sande sessions.

So strong, however, was the tendency to conform to custom that the rugged individualist was very likely to be eliminated and his "estate" divided among the surviving peers.

So long as he worked within limits prescribed by custom and the inspiration of the ancestral memories that clung to the masks, the "owner" was a grand old man who accepted approaching death complacently, feeling that he, too, would be preserved in the memory of his descendants by having a mask made to him, and that any contribution he had made to the culture of his people would be thereby perpetuated.

With this in mind it is possible to appreciate the tragedy of my old friends, dying off with the feeling that no mask would be made, and turning over their sacred relics to me in the hope that I would provide for them a final and suitable haven — in the Museum!

I can only hope that in this paper I have, to some extent, interpreted the gist of the matter, and that these old masks will lie in the vaults of the Museum enveloped by a suitable aura of appreciation.
